# Safety and Regulatory

## Audience

This guide is for the networking professional managing the standalone SZ2G-0416IXS switch series. It is recommended that only professionals with experience working with Planex Communications Inc. networking devices who are familiar with the Ethernet and local area networking terminology, should service the equipment.

## Conventions

The following conventions are used in this manual to convey instructions and information:

- Notes and cautions use the following conventions and symbols:

Note

Means additional information. Notes contain additional useful information or references to material available outside of this document.

Caution

Indicates that the reader must be careful. In a situation where a Caution is listed, a user may cause equipment damage or loss of data.

# 1. Introduction

Thank you for choosing an WEB Smart Ethernet Switch. This device is designed to be operational right out-of-the-box as a standard bridge. In the default configuration, it will forward packets between connecting devices after powered up.

Before you begin installing the switch, make sure you have all the package contents available, and a PC with a web browser for using web-based system management tools.

## 1.1. Overview

The SZ2G-0416IXS are L2 Smart switches with 16 2.5Gigabit ports + 4 10Gigabit ports.

## 1.2. Package contents

Before using the product, check that the items listed below are included and in good condition. If any item does not accord with the table, please contact your dealer immediately.

- SZ2G-0416IXS L2 Smart Switch
- Quick Installation Guide
- Power Cord
- Rack Mount Kit
- Foot pads

## 1.3. Features

- Supports up to 16 2.5G/1000M/100Mbps Gigabit Ethernet ports and 4 10Gbps SFP slots
- IEEE 802.1Q VLAN allows network segmentation to enhance performance and security
- Supports Access Control List (ACL)

- Switch capacity: SZ2G-0416IXS: 160Gbps, Forwarding rate: 119.04Mpps
- Supports IGMP Snooping V1 / V2 / V3
- 32K MAC address table and 12K jumbo frames
- 19-inch rack-mountable metal case

## 1.4. Product Components

### 1.4.1. Ports

The following view applies to SZ2G-0416IXS.

Figure 1 – Front View

No.	Name	Description
1	2.5G/1000M/100 Mbps RJ-45 ports (1~16)	Designed to connect to network devices with a bandwidth of 2.5Gbps, 1000Mbps or 100Mbps. Each has a corresponding 2.5G/1000M/100Mbps LED.
2	SFP (SFP1~SFP4) LNK/ACT ports	SFP ports: Designed to install SFP modules and connect to network devices with a bandwidth of 10Gbps or 1000Mbps. Each has a corresponding.

The following view applies to SZ2G-0416IXS.

Figure 2 – Rear View

No.	Name	Description
1	AC power in	Supports AC 100 – 240V, 50-60Hz.

## 1.4.2. LED Indicators

The following view applies to SZ2G-0416IXS.

Figure 3 – Front View LED Indicators

No.	Name	Description
1	Power	<ul style="list-style-type: none"> <li>Off: power off</li> <li>On: power on</li> </ul>
2	System	<ul style="list-style-type: none"> <li>Off: system not ready</li> <li>On: system ready</li> <li>Blinking: system boot-up</li> </ul>
3	Port LED	LINK/ACT bi-color LED: <ul style="list-style-type: none"> <li>Off: port disconnected or link fail</li> <li>Green on: 2.5Gbps connected</li> <li>Amber on: 1000/100Mbps connected</li> <li>Blinking: sending or receiving data</li> </ul>
4	SFP LED	<ul style="list-style-type: none"> <li>Off: port disconnected or link fail</li> <li>Blue on: 10Gbps connected</li> <li>Green on: 1000Mbps connected</li> </ul>

## 2. Installation

This chapter describes how to install and connect your Planex Communications Inc. Switch. Read the following topics and perform the procedures in the correct order. Incorrect installation may cause damage to the product.

### 2.1. Mounting the Switch

There are two ways to physically set up the switch.

- Place the switch on a flat surface. To place the switch on a desktop, install the four rubber feet (included) on the bottom of the switch.
- Mount the switch in a standard rack (1 rack unit high).

#### 2.1.1. Placement Tips

- Ambient Temperature—To prevent the switch from overheating, do not operate it in an area that exceeds an ambient temperature of 40°C.
- Air Flow—Be sure that there is adequate air flow around the switch.
- Mechanical Loading—Be sure that the switch is level and stable to avoid any hazardous conditions.
- Circuit Overloading—Adding the switch to the power outlet must not overload that circuit.

Follow these guidelines to install the switch securely.

1. Put the switch in a stable place such as a desktop, to avoid it falling.
2. Ensure the switch works in the proper AC input range and matches the voltage labeled.
3. Ensure there is proper heat dissipation from and adequate ventilation around the switch.
4. Ensure the switch's location can support the weight of the switch and its accessories.

## 2.1.2. Rack Mounting

You can mount the switch in any standard size, 19-inch (about 48 cm) wide rack. The switch requires 1 rack unit (RU) of space, which is 1.75 inches (44.45 mm) high.

For stability, load the rack from the bottom to the top, with the heaviest devices on the bottom. A top-heavy rack is likely to be unstable and may tip over.

When mounting smaller switch products into a standard 19-inch rack, a pair of extension brackets (sometimes referred to as ears) are needed to adapt the switch to the rack size.

These extension brackets are mounted on the switch using the screws provided in the kit, and have two holes that are used to then screw the switch into the rack.

An example of one type of these extension brackets is shown in the following figure.

A common problem that occurs during rack mounting is the distance between the screw holes on the rack. Some racks are made with a uniform distance between all the holes, and others have the holes organized into groups (see photo on the next page for an example).

When organized into groups, the switch must be placed in the rack so that the holes in the extension brackets line up correctly.

1. Align the mounting brackets with the mounting holes on the switch's side panels and secure the brackets with the screws provided.
2. Secure the switch on the equipment rack with the screws provided.

## 3. Getting Started

This section introduces the web-based configuration utility, and covers the following topics:

- Powering on the device
- Connecting to the network
- Starting the web-based configuration utility

### 3.1. Power

#### 3.1.1. Connecting to Power

Power down and disconnect the power cord before servicing or wiring a switch.

Do not disconnect modules or cabling unless the power is first switched off. The device only supports the voltage outlined in the type plate. Do not use any other power components except those specifically designated for the switch.

Disconnect the power cord before installation or cable wiring.

The switch is powered by the AC 100-240 V 50/60Hz internal high-performance power supply. It is recommended to connect the switch with a single-phase three-wire power source with a neutral outlet, or a multifunctional computer professional source.

Connect the AC power connector on the back panel of the switch to the external power source with the included power cord, and check the power LED is on.

Figure 7 – Rear View AC Power Socket

### 3.1.2. Connecting to the Network

To connect the switch to the network:

1. Connect an Ethernet cable to the Ethernet port of a computer
2. Connect the other end of the Ethernet cable to one of the numbered Ethernet ports of the switch. The LED of the port lights if the device connected is active.
3. Repeat Step 1 and Step 2 for each device to connect to the switch.

We strongly recommend using CAT-5E or better cable to connect network devices. When connecting network devices, do not exceed the maximum cabling distance of 100 meters (328 feet). It can take up to one minute for attached devices or the LAN to be operational after it is connected. This is normal behavior.

Connect the switch to end nodes using a standard Cat 5/5e Ethernet cable (UTP/STP) to connect the switch to end nodes as shown in the illustration below.

Switch ports will automatically adjust to the characteristics (MDI/MDI-X, speed, duplex) of the device to which the switch is connected.

### 3.1.3. Starting the Web-based Configuration Utility

This section describes how to navigate the web-based switch configuration utility. Be sure to disable any pop-up blocker.

#### *Browser Restrictions*

- If you are using older versions of Internet Explorer, you cannot directly use an IPv6 address to access the device. You can, however, use the DNS (Domain Name System) server to create a domain name that contains the IPv6 address, and then use that domain name in the address bar in place of the IPv6 address.
- If you have multiple IPv6 interfaces on your management station, use the IPv6 global address instead of the IPv6 link local address to access the device from your browser.

## Launching the Configuration Utility

To open the web-based configuration utility:

1. Open a Web browser.
2. Enter the IP address of the device you are configuring in the address bar on the browser (factory default IP address is 192.168.2.1) and then press Enter.

When the device is using the factory default IP address, its power LED flashes continuously. When the device is using a DHCP assigned IP address or an administrator-configured static IP address, the power LED is lit a solid color. Your computer's IP address must be in the same subnet as the switch. For example, if the switch is using the factory default IP address, your computer's IP address can be in the following range: 192.168.2.x (whereas x is a number from 2 to 254).

After a successful connection, the login window displays.

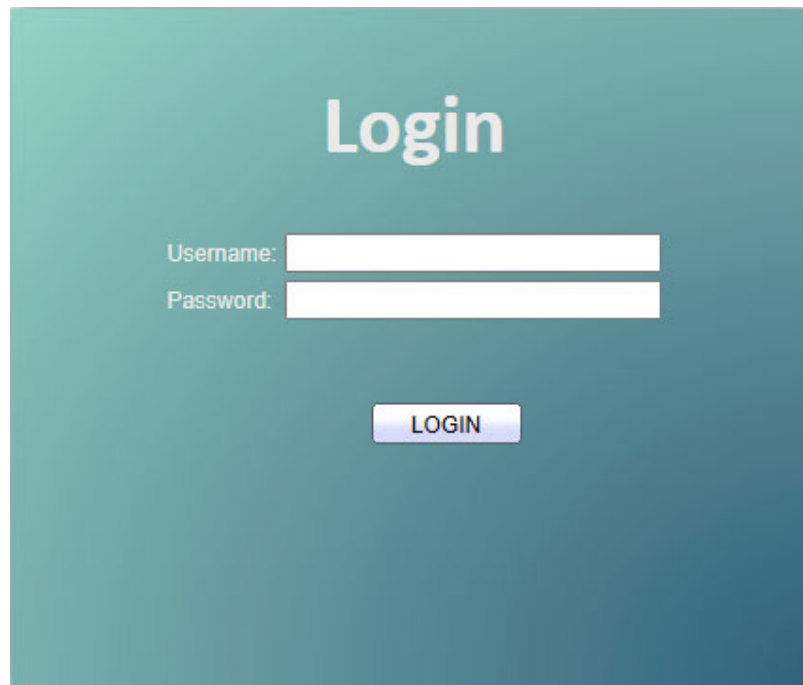

A screenshot of a web-based login window. The background is a teal-to-blue gradient. At the top center, the word "Login" is displayed in a large, white, sans-serif font. Below this, there are two white input fields. The first field is preceded by the label "Username:" and the second by "Password:". Both labels are in a small, white, sans-serif font. Below the input fields, there is a white rectangular button with the word "LOGIN" in a blue, sans-serif font.

Figure 9 – Login Window

### 3.1.4. Logging In

The default username is admin and the default password is admin. The first time that you log in with the default username and password, you are required to enter a new password.

To log in to the device configuration utility:

1. Enter the default user ID (admin) and the default password (password).
2. If this is the first time that you logged on with the default user ID (admin) and the default password (password) it is recommended that you change your password immediately. See "4.13.1. User Account" on page 171 for additional information.

When the login attempt is successful, the System Information window displays.

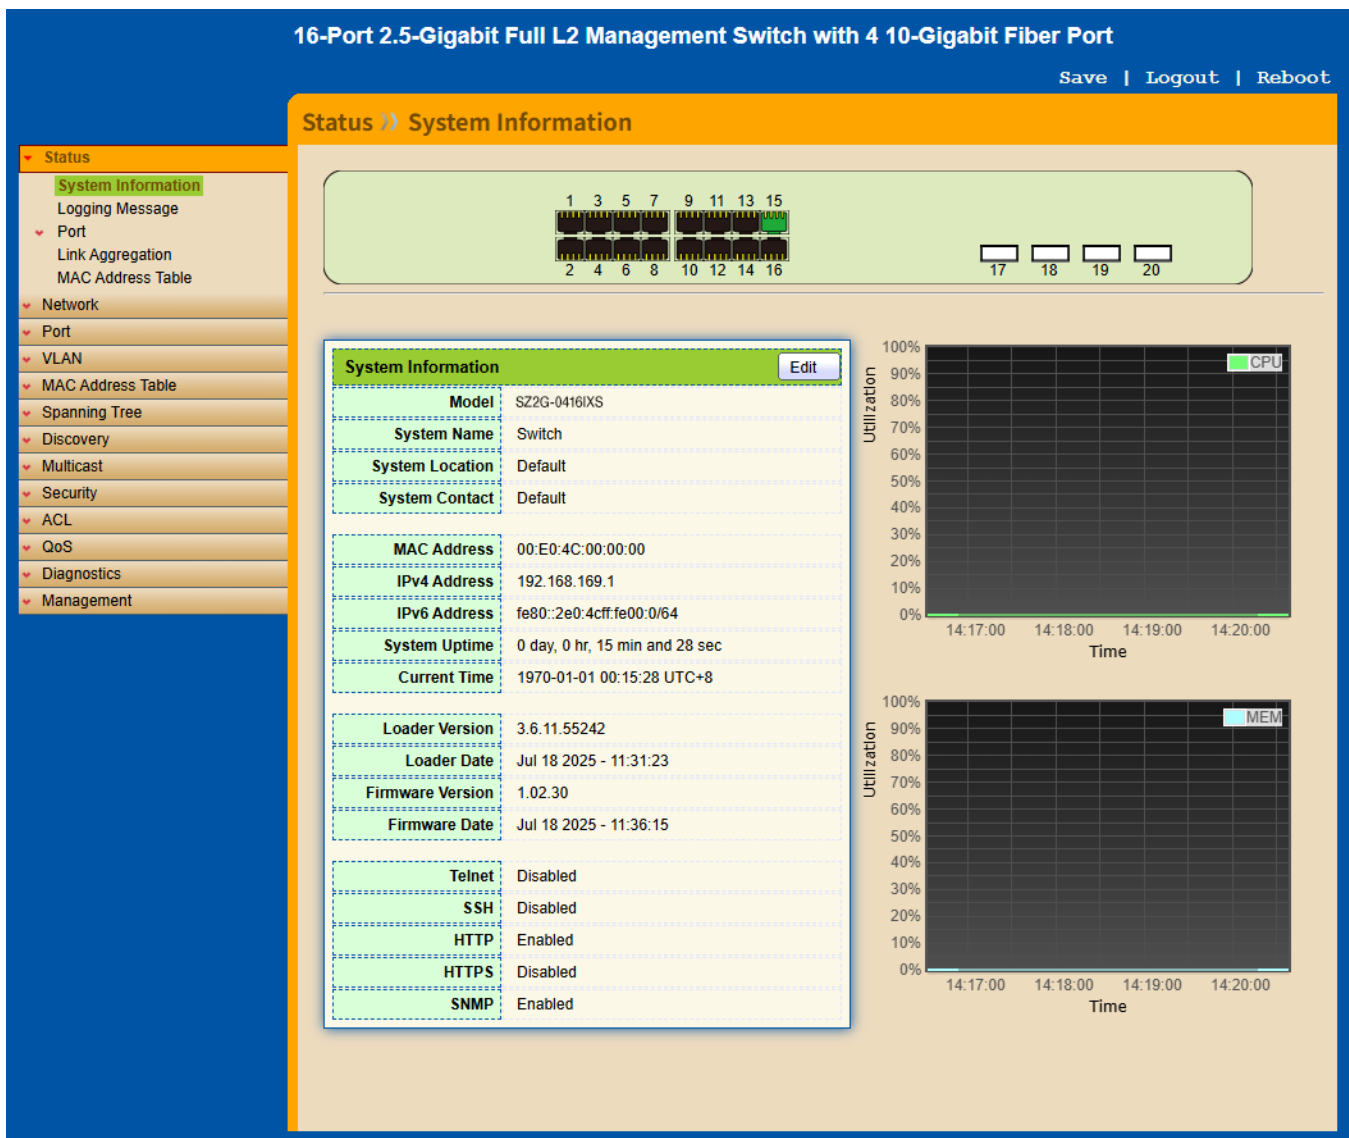

Figure 10 – System Information

If you entered an incorrect username or password, an error message appears and the Login page remains displayed on the window. If you are having problems logging in, please see the Launching the Configuration Utility Section in the Administration Guide for additional information.

## Logging Out

By default, the application logs out after ten minutes of inactivity.

To logout, click Logout in the top right corner of any page. The system logs out of the device.

When a timeout occurs or you intentionally log out of the system, a message appears and the Login page appears, with a message indicating the logged-out state. After you log in, the application returns to the initial page.

# 4. Web-based Switch Configuration

The smart switch software provides rich Layer 2 functionality for switches in your networks. This chapter describes how to use the web-based management interface (Web UI) to configure the switch’s features.

For the purposes of this manual, the user interface is separated into four sections, as shown in the following figure:

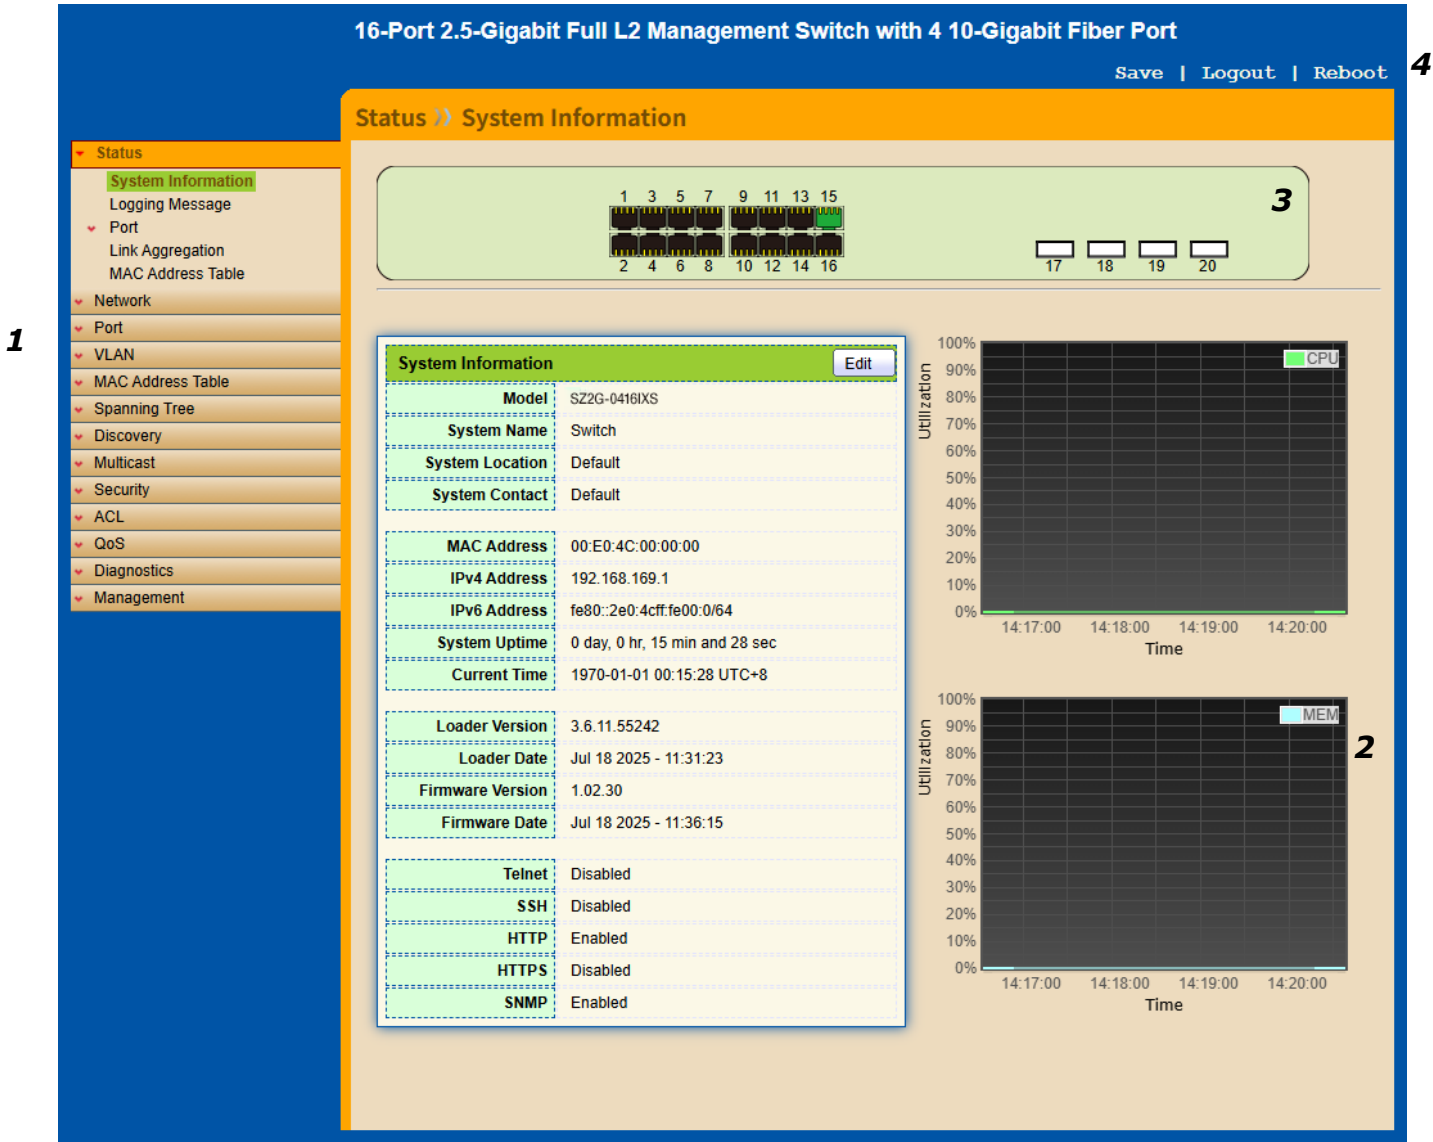

Figure 11 – User Interface

No.	Name	Description
1	Configuration menu	Navigate to locate specific switch functions.
2	Configuration settings	Edit specific function settings.

3	Switch's current link status	Green squares indicate the port link is up, while black squares indicate the port link is down.
4	Common toolbar	Provides access to frequently used settings.

## 4.1. Status

Use the Status pages to view system information and status.

### 4.1.1. System Information

This page shows switch panel, CPU utilization, Memory utilization and other system current information. It also allows user to edit some system information.

To display the Device Information web page, click **Status > System Information**.

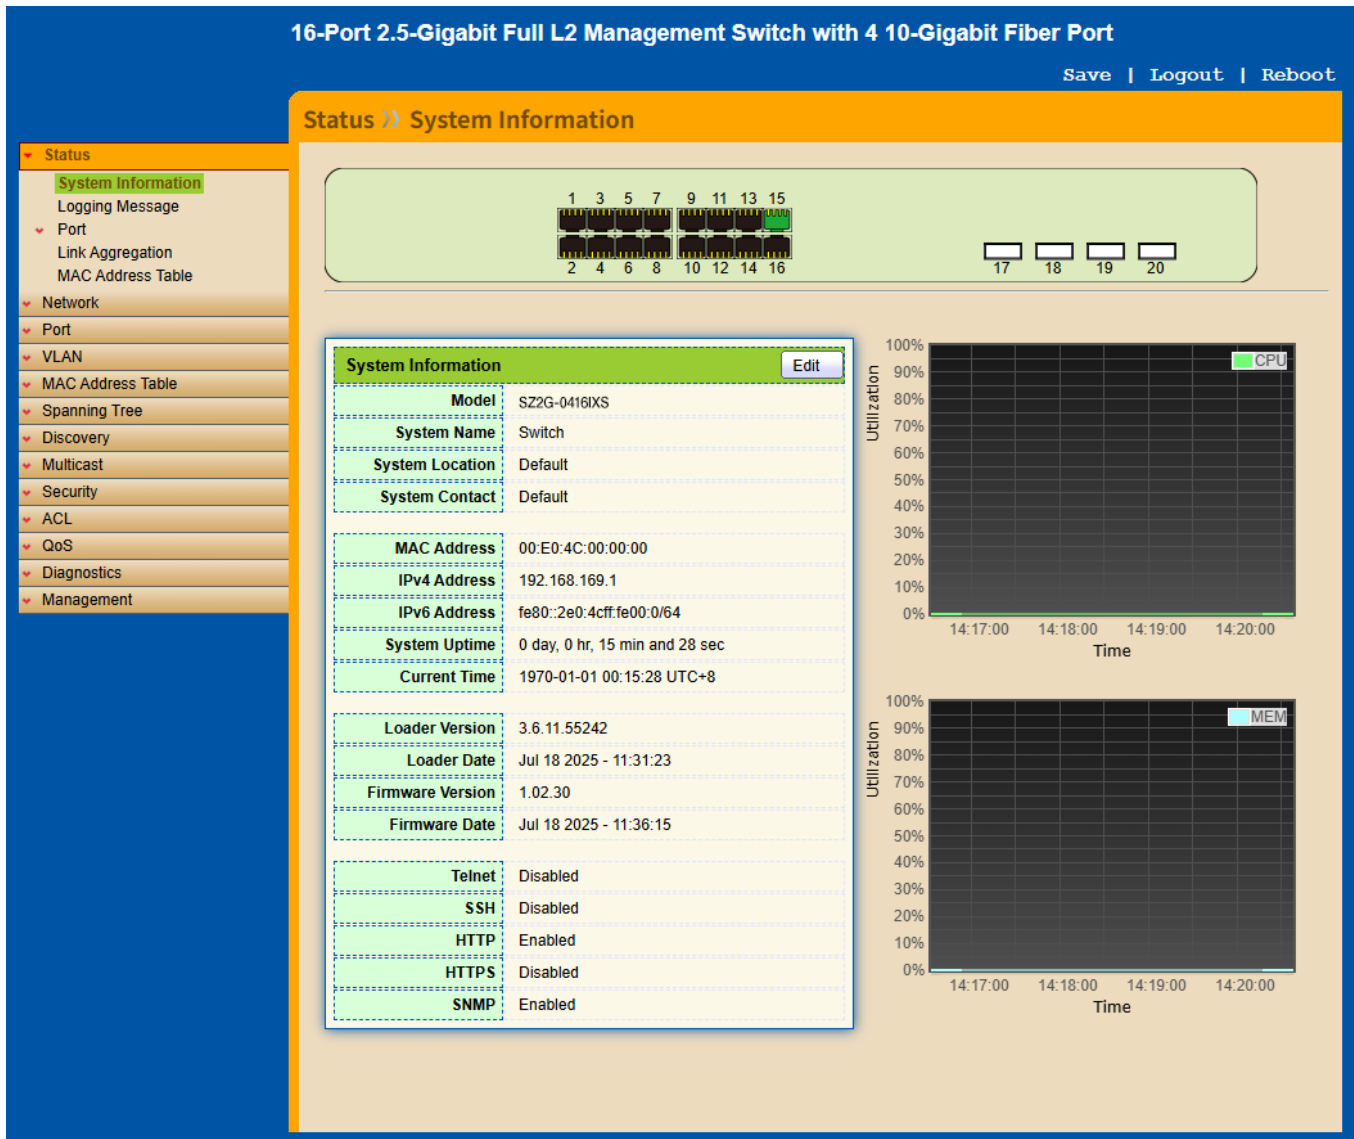

Figure 12 - Status > System Information

Item	Description
Model	Model name of the switch.
System Name	System name of the switch. This name will also use as CLI prefix of each line. ( "Switch>" or "Switch#" ).

System Location	Location information of the switch.
System Contact	Contact information of the switch.
MAC Address	Base MAC address of the switch.
IPv4 Address	Current system IPv4 address.
IPv6 Address	Current system IPv6 address.
System Uptime	Total elapsed time from booting.
Current Time	Current system time.
Loader Version	Boot loader image version.
Loader Date	Boot loader image build date.
Firmware Version	Current running firmware image version.
Firmware Date	Current running firmware image build date.
Telnet	Current Telnet service enable/disable state.
SSH	Current SSH service enable/disable state.
HTTP	Current HTTP service enable/disable state.
HTTPS	Current HTTPS service enable/disable state.
SNMP	Current SNMP service enable/disable state.

Click “Edit” button on the table title to edit following system information.

The screenshot shows a web-based form titled "Edit System Information". The form is enclosed in a dashed border. It contains three input fields, each with a label and a text box: "System Name" (value: Switch), "System Location" (value: Default), and "System Contact" (value: Default). Below the input fields are two buttons: "Apply" and "Close".

Figure 13 - Status > System Information > Edit System Information

Item	Description
System Name	System name of the switch. This name will also use as CLI prefix of each line. ( “Switch>” or “Switch#” ).
System Location	Location information of the switch.
System Contact	Contact information of the switch.

## 4.1.2. Logging Message

To view the logging messages stored on the RAM and Flash, click **Status > Logging Message**.

### Logging Message Table

Viewing **RAM** ▼

Clear	Clear the logging messages.
Refresh	Refresh the logging messages.

## 4.1.3. Port

The Port configuration page displays port summary and status information.

### 4.1.3.1. Statistics

This page displays standard counters on network traffic from the Interfaces, Ethernet-like and RMONMIB. Interfaces and Ethernet-like counters display errors on the traffic passing through each port. RMON counters provide a total count of different frame types and sizes passing through each port. The “Clear” button will clear MIB counter of current selected port.

To display the Port Flow Chart web page, click **Status > Port > Statistics**.

Figure 15 - Status > Port > Statistics

Item	Description
Port	Select one port to show counter statistics.
MIB Counter	Select the MIB counter to show different counter type <ul style="list-style-type: none"> <li>• All: All counters.</li> <li>• Interface: Interface related MIB counters.</li> <li>• Etherlike: Ethernet-like related MIB counters.</li> <li>• RMON: RMON related MIB counters.</li> </ul>
Refresh Rate	Refresh the web page every period of seconds to get new counter of specified port.

#### 4.1.3.2. Error Disabled

To display the Error Disabled web page, click **Status > Port > Error Disabled**.

Error Disabled Table			
			Q <input type="text"/>
<input type="checkbox"/>	Port	Reason	Time Left (sec)
<input type="checkbox"/>	GE1	---	---
<input type="checkbox"/>	GE2	---	---
<input type="checkbox"/>	LAG7	---	---
<input type="checkbox"/>	LAG8	---	---
<input type="button" value="Refresh"/> <input type="button" value="Recover"/>			

Figure 16 - Status > Port > Error Disabled

Item	Description
<input type="checkbox"/>	Select one or more port to operate.
Port	Interface or port number.
Reason	Port will be disabled by one of the following error reasons: <ul style="list-style-type: none"> <li>• BPDU Guard</li> <li>• UDLD</li> <li>• Self Loop</li> <li>• Broadcast Flood</li> <li>• Unknown Multicast Flood</li> <li>• Unicast Flood</li> <li>• ACL</li> <li>• Port Security Violation</li> <li>• DHCP rate limit</li> <li>• ARP rate limit</li> </ul>
Time Left (sec)	The time left in second for the error recovery.
<b>Refresh</b>	Refresh the current page.
<b>Recover</b>	Recover the selected port status.

### 4.1.3.3. Bandwidth Utilization

This page allow user to browse ports' bandwidth utilization in real time. This page will refresh automatically in every refresh period.

To display Bandwidth Utilization web page, click **Status > Port > Bandwidth Utilization**.

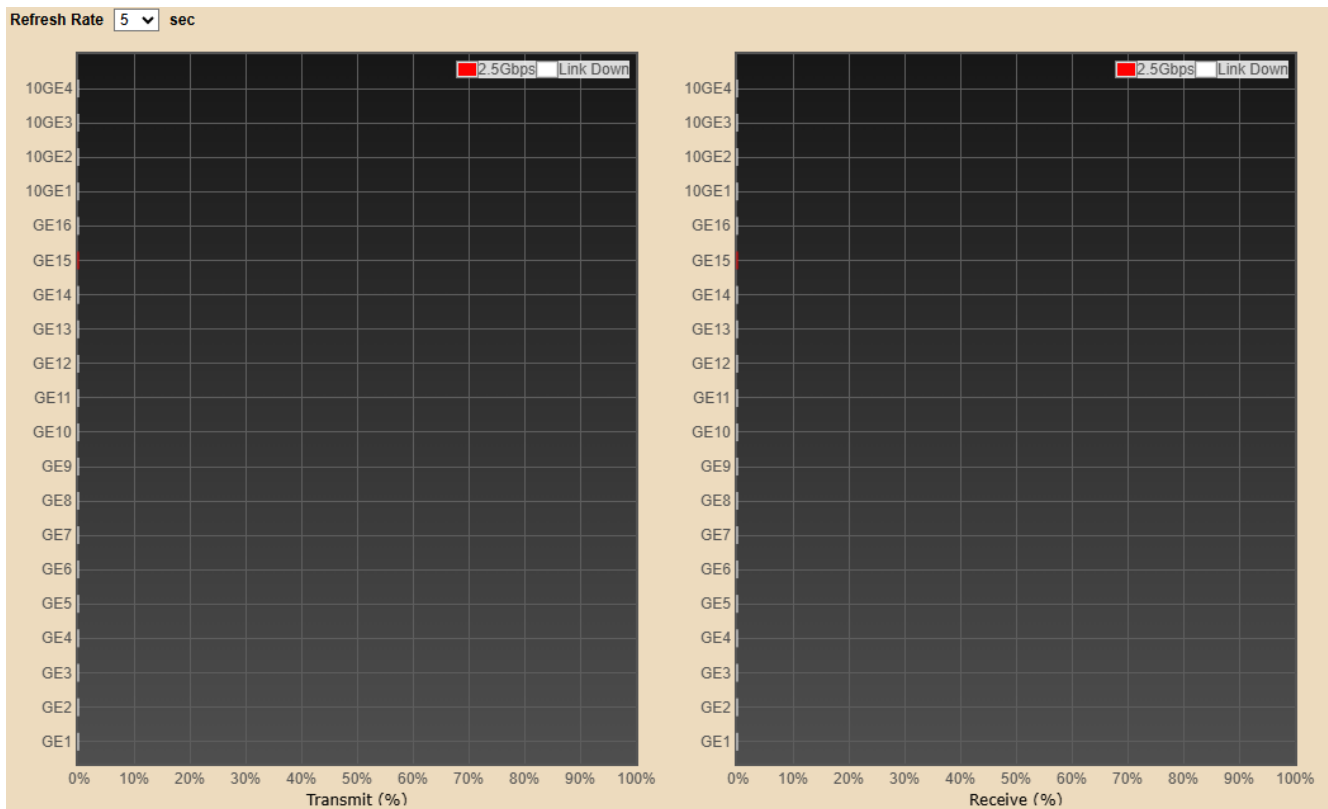

Figure 17 - Status > Port > Bandwidth Utilization

Item	Description
Refresh Rate	Refresh the web page every period of seconds to get new bandwidth utilization data.

#### 4.1.4. Link Aggregation

To display the Link Aggregation web page, click **Status > Link Aggregation**.

Link Aggregation Table						
LAG	Name	Type	Link Status	Active Member	Inactive Member	
LAG 1	---	---	---			
LAG 2	---	---	---			
LAG 3	---	---	---			
LAG 4	---	---	---			
LAG 5	---	---	---			
LAG 6	---	---	---			
LAG 7	---	---	---			
LAG 8	---	---	---			

Figure 18 - Status > Link Aggregation

Item	Description
LAG	LAG Name.
Name	LAG port description.

Type	<ul style="list-style-type: none"> <li>The type of the LAG.</li> <li>Static: The group of ports assigned to a static LAG are always active members.</li> <li>LACP: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.</li> </ul>
Link Status	LAG port link status.
Active Member	Active member ports of the LAG.
Inactive Member	Inactive member ports of the LAG.

### 4.1.5. MAC Address Table

The MAC address table page displays all MAC address entries on the switch including static MAC address created by administrator or auto learned from hardware. The “Clear” button will clear all dynamic entries and “Refresh” button will retrieve latest MAC address entries and show them on page.

To display the MAC Address Table web page, click **Status > MAC Address Table**.

VLAN	MAC Address	Type	Port
1	00:E0:4C:00:00:00	Management	CPU
1	00:E0:4C:68:00:01	Dynamic	GE15

Figure 19 - Status > MAC Address Table

Item	Description
VLAN	VLAN ID of the mac address.
MAC Address	MAC address.
Type	<p>The type of MAC address</p> <ul style="list-style-type: none"> <li>Management: DUT’ s base mac address for management Purpose.</li> <li>Static: Manually configured by administrator</li> <li>Dynamic: Auto learned by hardware.</li> </ul>
Port	<p>The type of Port</p> <ul style="list-style-type: none"> <li>CPU: DUT’ s CPU port for management purpose.</li> <li>Other: Normal switch port.</li> </ul>

## 4.2. Network

Use the Network pages to configure settings for the switch network interface and

**Web-based Switch Configuration**

how the switch connects to a remote server to get services.

### 4.2.1. IP Address

This section allows you to edit the IP address, Netmask, Gateway and DNS server of the switch.

To view the IP Address menu, navigate to **Network > IP Address**.

IPv4 Address	
Address Type	<input checked="" type="radio"/> Static <input type="radio"/> Dynamic
IP Address	<input type="text" value="192.168.169.1"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Default Gateway	<input type="text" value="192.168.169.254"/>
DNS Server 1	<input type="text" value="168.95.1.1"/>
DNS Server 2	<input type="text" value="168.95.192.1"/>

IPv6 Address	
Auto Configuration	<input checked="" type="checkbox"/> Enable
DHCPv6 Client	<input type="checkbox"/> Enable
IPv6 Address	<input type="text"/>
Prefix Length	<input type="text" value="0"/> (0 - 128)
IPv6 Gateway	<input type="text"/>
DNS Server 1	<input type="text"/>
DNS Server 2	<input type="text"/>

Operational Status	
IPv4 Address	192.168.169.1
IPv4 Default Gateway	192.168.169.254
IPv6 Address	fe80::2e0:4cff:fe00:0/64
IPv6 Gateway	::
Link Local Address	fe80::2e0:4cff:fe00:0/64

Apply

Figure 20 – Network > IP Address

Item	Description
------	-------------

Address Type	The address type of switch IP configuration including <ul style="list-style-type: none"> <li>• <b>Static:</b> Static IP configured by users will be used.</li> <li>• <b>Dynamic:</b> Enable the DHCP to obtain the IP address from a DHCP server.</li> </ul>
IP Address	Specify the switch static IP address on the static configuration.
Subnet Mask	Specify the switch subnet mask on the static configuration.
Default Gateway	Specify the default gateway on the static configuration. The default gateway must be in the same subnet with switch IP address configuration.
DNS Server 1	Specify the primary user-defined IPv4 DNS server configuration.
DNS Server 2	Specify the secondary user-defined IPv4 DNS server configuration.
Table 3-2: IPv6 Address fields	
IPv4 Address	The operational IPv4 address of the switch.
IPv4 Gateway	The operational IPv4 gateway of the switch.
IPv6 Address v6	The operational IPv6 address of the switch.
IPv6 Gateway	The operational IPv6 gateway of the switch.
Link Local Address	The IPv6 link local address for the switch.

### 4.2.2. System Time

This page allow user to set time source, static time, time zone and daylight saving settings. Time zone and daylight saving takes effect both static time or time from SNTP server.

To display System Time page, click **Network > System Time**

Source	<input type="radio"/> SNTP <input type="radio"/> From Computer <input checked="" type="radio"/> Manual Time	
Time Zone	UTC +8:00 ▼	
<b>SNTP</b>		
Address Type	<input checked="" type="radio"/> Hostname <input type="radio"/> IPv4	
Server Address	<input type="text"/>	
Server Port	<input type="text" value="123"/>	(1 - 65535, default 123)
<b>Manual Time</b>		
Date	<input type="text" value="1970-01-01"/>	YYYY-MM-DD
Time	<input type="text" value="00:40:22"/>	HH:MM:SS
<b>Daylight Saving Time</b>		
Type	<input checked="" type="radio"/> None <input type="radio"/> Recurring <input type="radio"/> Non-recurring <input type="radio"/> USA <input type="radio"/> European	
Offset	<input type="text" value="60"/>	Min (1 - 1440, default 60)
Recurring	From: Day <input type="text" value="Sun"/> Week <input type="text" value="First"/> Month <input type="text" value="Jan"/> Time <input type="text"/>	
	To: Day <input type="text" value="Sun"/> Week <input type="text" value="First"/> Month <input type="text" value="Jan"/> Time <input type="text"/>	
Non-recurring	From: <input type="text"/> YYYY-MM-DD <input type="text"/> HH:MM	
	To: <input type="text"/> YYYY-MM-DD <input type="text"/> HH:MM	
<b>Operational Status</b>		
Current Time	1970-01-01 00:40:22 UTC+8	
<input type="button" value="Apply"/>		

Figure 21 - Network > System Time

Item	Description
Source	Select the time source. <ul style="list-style-type: none"> <li>• SNTP: Time sync from NTP server.</li> <li>• From Computer: Time set from browser host.</li> <li>• Manual Time: Time set by manually configure.</li> </ul>
Time Zone	Select a time zone difference from listing district.
<b>SNTP</b>	
Address Type	Select the address type of NTP server. This is enabled when time source is SNTP.

Server Address	Input IPv4 address or hostname for NTP server. This is enabled when time source is SNTP.
Server Port	Input NTP port for NTP server. Default is 123. This is enabled when time source is SNTP.
<b>Manual Time</b>	
Date	Input manual date. This is enabled when time source is manual.
Time	Input manual time. This is enabled when time source is manual.
<b>Daylight Saving Time</b>	
Type	Select the mode of daylight saving time. <ul style="list-style-type: none"> <li>• Disable: Disable daylight saving time.</li> <li>• Recurring: Using recurring mode of daylight saving time.</li> <li>• Non-Recurring: Using non-recurring mode of daylight saving time.</li> <li>• USA: Using daylight saving time in the United States that starts on the second Sunday of March and ends on the first Sunday of November.</li> <li>• European: Using daylight saving time in the Europe that starts on the last Sunday in March and ending on the last Sunday in October.</li> </ul>
Offset	Specify the adjust offset of daylight saving time.
Recurring From	Specify the starting time of recurring daylight saving time. This field available when selecting “Recurring” mode.
Recurring To	Specify the ending time of recurring daylight saving time. This field available when selecting “Recurring” mode.
Non-recurring From	Specify the starting time of non-recurring daylight saving time. This field available when selecting “Non-recurring” mode.
Non-recurring To	Specify the ending time of recurring daylight saving time. This field available when selecting “Non-recurring”

## 4.3. Port

Use the Port pages to configure settings for switch port related features.

### 4.3.1. Port Setting

This page shows port current status and allow user to edit port configurations. Select port entry and click “Edit” button to edit port configurations.

To display Port Setting web page, click **Port > Port Setting**

## Port Setting Table

<input type="checkbox"/>	Entry	Port	Type	Description	State	Link Status	Speed	Duplex	Flow Control

--------------	--

### 4.3.2. Error Disable

To display Error Disabled web page, click **Port > Error Disabled**

Figure 24 - Port > Error disable

Item	Description
Recover Interval	Auto recovery after this interval for error disabled port.
BPDU Guard	Enabled to auto shutdown port when BPDU Guard reason occur. This reason caused by STP BPDU Guard mechanism.
UDLD	Enabled to auto shutdown port when UDLD violation occur.
Self Loop	Enabled to auto shutdown port when Self Loop reason occur.
Broadcast Flood	Enabled to auto shutdown port when Broadcast Flood reason occur. This reason caused by broadcast rate exceed broadcast storm control rate.
Unknown Multicast Flood	Enabled to auto shutdown port when Unknown Multicast Flood reason occur. This reason caused by unknown multicast rate exceed unknown multicast storm control rate.
Unicast Flood	Enabled to auto shutdown port when Unicast Flood reason occur. This reason caused by unicast rate exceed unicast storm control rate.

ACL	Enabled to auto shutdown port when ACL shutdown port reason occur. This reason caused packet match the ACL shutdown port action.
Port Security	Enabled to auto shutdown port when Port Security Violation reason occur. This reason caused by violation port security rules.
DHCP rate limit	Enabled to auto shutdown port when DHCP rate limit reason occurs. This reason caused by DHCP packet rate exceed DHCP rate limit.
ARP rate limit	Enabled to auto shutdown port when ARP rate limit reason occur. This reason caused by DHCP packet rate exceed ARP rate limit.

### 4.3.3. Link Aggregation

#### 4.3.3.1. Group

This page allow user to configure link aggregation group load balance algorithm and group member.

To view the Group menu, navigate to **Port > Link Aggregation > Group**.

LAG	Name	Type	Link Status	Active Member	Inactive Member
<input type="radio"/> LAG 1	---	---	---		
<input type="radio"/> LAG 2	---	---	---		
<input type="radio"/> LAG 3	---	---	---		
<input type="radio"/> LAG 4	---	---	---		
<input type="radio"/> LAG 5	---	---	---		
<input type="radio"/> LAG 6	---	---	---		
<input type="radio"/> LAG 7	---	---	---		
<input type="radio"/> LAG 8	---	---	---		

Figure 25 - Port > Link Aggregation > Group

Item	Description
------	-------------

Load Balance Algorithm	LAG load balance distribution algorithm <ul style="list-style-type: none"> <li>• src-mac: Based on Source MAC address.</li> <li>• dst-mac: Based on Destination MAC address.</li> <li>• src-dst-mac: Based on Source or Destination MAC address.</li> <li>• src-ip: Based on Source IP address</li> <li>• dst-ip: Based on Destination IP address</li> <li>• src-dst-ip: Based on Source or Destination IP address.</li> </ul>
LAG	LAG Name.
Name	LAG port description.
Type	The type of the LAG <ul style="list-style-type: none"> <li>• Static: The group of ports assigned to a static LAG are always active members.</li> <li>• LACP: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.</li> </ul>
Link Status	LAG port link status
Active Member	Active member ports of the LAG.
Inactive Member	Inactive member ports of the LAG.

Click “Edit” to edit Link Aggregation Group menu.

Figure 26 - Port > Link Aggregation > Group > Edit Link Aggregation Group

Item	Description
LAG	Selected LAG group ID.
Name	LAG port description.

Type	<p>The type of the LAG</p> <ul style="list-style-type: none"> <li>• Static: The group of ports assigned to a static LAG are always active members.</li> <li>• Active: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.</li> <li>• Passive: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are passive member ports.</li> </ul>
Member	Select available port to be LAG group member port.

### 4.3.3.2. Port Setting

This page shows LAG port current status and allows user to edit LAG port configurations. Select LAG entry and click “Edit” button to edit LAG port configurations.

To display LAG Port Setting web page, click **Port > Link Aggregation > Port Setting**.

Port Setting Table

<input type="checkbox"/>	LAG	Type	Description	State	Link Status	Speed	Duplex	Flow Control

### 4.3.5. Jumbo Frame

This page allow user to configure switch jumbo frame size.

To display Jumbo Frame web page, click **Port > Jumbo Frame**

Figure 33 - Port > Jumbo Frame

Item	Description
Jumbo Frame	Enable or disable jumbo frame. When jumbo frame is enabled, switch max frame size is allowed to configure. When jumbo frame is disabled, default frame size 1522 will be used.

## 4.4. VLAN

A virtual local area network, virtual LAN or VLAN, is a group of hosts with a common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of their physical location. A VLAN has the same attributes as a physical local area network (LAN), but it allows for end stations to be grouped together even if they are not located on the same network switch. VLAN membership can be configured through software instead of physically relocating devices or connections.

### 4.4.1. VLAN

Use the VLAN pages to configure settings of VLAN.

#### 4.4.1.1. Create VLAN

This page allows user to add or delete VLAN ID entries and browser all VLAN entries that add statically or dynamic learned by GVRP. Each VLAN entry has a unique name, user can edit VLAN name in edit page.

To display Create VLAN page, click **VLAN > VLAN > Create VLAN**

**VLAN**

Available VLAN

- VLAN 2
- VLAN 3
- VLAN 4
- VLAN 5
- VLAN 6
- VLAN 7
- VLAN 8
- VLAN 9

Created VLAN

- VLAN 1

Apply

**VLAN Table**

Forward Delay	15 Sec (4 - 30, default 15)
Tx Hold Count	6 (1 - 10, default 6)
Region Name	00:E0:4C:00:00:00
Revision	0 (0 - 65535, default 0)
Max Hop	20 (1 - 40, default 20)
<b>Operational Status</b>	
Bridge Identifier	32768-00:E0:4C:00:00:00
Designated Root Bridge	0-00:00:00:00:00:00
Root Port	N/A
Root Path Cost	0
Topology Change Count	0
Last Topology Change	0D/0H/0M/0S
<input type="button" value="Apply"/>	

Figure 67 - Spanning Tree > Property

Item	Description
State	Enable/disable the STP on the switch.
Operation Mode	Specify the STP operation mode. <ul style="list-style-type: none"> <li>STP: Enable the Spanning Tree (STP) operation.</li> <li>RSTP: Enable the Rapid Spanning Tree (RSTP) operation.</li> <li>MSTP: Enable the Multiple Spanning Tree (MSTP) operation.</li> </ul>
Path Cost	Specify the path cost method. <ul style="list-style-type: none"> <li>Long: Specifies that the default port path costs are within the range:1-200,000,000.</li> <li>Short: Specifies that the default port path costs are within the range:1-65,535.</li> </ul>

BPDU Handling	Specify the BPDU forward method when the STP is disabled. <ul style="list-style-type: none"> <li>Filtering: Filter the BPDU when STP is disabled.</li> <li>Flooding: Flood the BPDU when STP is disabled.</li> </ul>
Priority	Specify the bridge priority. The valid range is from 0 to 61440, and the value should be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower value has the higher priority for the switch to be selected as the root bridge of the topology.
Hello Time	Specify the STP hello time in second to broadcast its hello message to other bridges by Designated Ports. Its valid range is from 1 to 10 seconds.
Max Age	Specify the time interval in seconds for a switch to wait the configuration messages, without attempting to redefine its own configuration.
Forward Delay	Specify the STP forward delay time, which is the amount of time that a port remains in the Listening and Learning states before it enters the Forwarding state. Its valid range is from 4 to 10 seconds.
TX Hold Count	Specify the Tx-hold-count used to limit the maximum numbers of packets transmission per second. The valid range is from 1 to 10.
Region Name	The MSTP instance name. Its maximum length is 32 characters. The default value is the MAC address of the switch.
Revision	The MSTP revision number. Its valid range is from 0 to 65535.
Max Hop	Specify the number of hops in an MSTP region before the BPDU is discarded. The valid range is 1 to 40.
<b>Operational Status</b>	
Bridge Identifier	Bridge identifier of the switch.
Designated Root Bridge	Bridge identifier of the designated root bridge.
Root Port	Operational root port of the switch.
Root Path Cost	Operational root path cost.
Topology Change Count	Numbers of the topology changes.
Last Topology Change	The last time for the topology change.

## 4.6.2. Port Setting

To configure and display the STP port settings, click **STP > Port Setting**.

Port Setting Table

Entry	Port	State	Path Cost	Priority	BPDU Filter	BPDU Guard	Operational Edge	Operational Point-to-Point	Port Role	Port State	Designated Bridge	Designated Port ID	Designated Cost
<input type="checkbox"/>	1 GE1	Enabled	8000	128	Disabled	Disabled	Disabled	Disabled	Disabled	Disabled	0-00 00 00 00 00 00	128-1	8000

Figure 68 - Spanning Tree > Port Setting

Item	Description
Port	Specify the interface ID or the list of interface IDs.
State	The operational state on the specified port.
Path Cost	STP path cost on the specified port.
Priority	STP priority on the specified port.
BPDU Filter	The states of BPDU filter on the specified port.
BPDU Guard	The states of BPDU guard on the specified port.
Operational Edge	The operational edge port status on the specified port.
Operational Point-to-Point	The operational point-to-point status on the specified port.
Port Role	The current port role on the specified port. The possible values are: "Disabled" , "Master" , "Root" , "Designated" , "Alternative" , and "Backup" .
Port State	The current port state on the specified port. The possible values are: "Disabled" , "Discarding" , "Learning" , and "Forwarding" .
Designated Bridge	The bridge ID of the designated bridge.
Designated Port ID	The designated port ID on the switch.
Designated Cost	The path cost of the designated port on the switch.
<b>Protocol Migration Check</b>	Restart the Spanning Tree Protocol (STP) migration process (re-negotiate with its neighborhood) on the specific interface.

Click "Edit" button to view Edit Port Setting menu.

## 4.7. Discovery

### Web-based Switch Configuration

Use this section to configure LLDP.

## 4.7.1. LLDP

LLDP is a one-way protocol; there are no request/response sequences. Information is advertised by stations implementing the transmit function, and is received and processed by stations implementing the receive function. The LLDP category contains LLDP and LLDP-MED pages.

### 4.7.1.1. Property

To display LLDP Property Setting web page, click **Discovery > LLDP > Property**.

**LLDP**

**State** ☒ Enable

**LLDP Handling** ☐ Filtering ☐ Bridging ☒ Flooding

**TLV Advertise Interval**  Sec (5 - 32767, default 30)

**Hold Multiplier**  (2 - 10, default 4)

**Reinitializing Delay**  Sec (1 - 10, default 2)

**Transmit Delay**  Sec (1 - 8191, default 2)

**LLDP-MED**

**Fast Start Repeat Count**  (1 - 10, default 3)

Apply

Figure 76 - Discovery > LLDP > Property

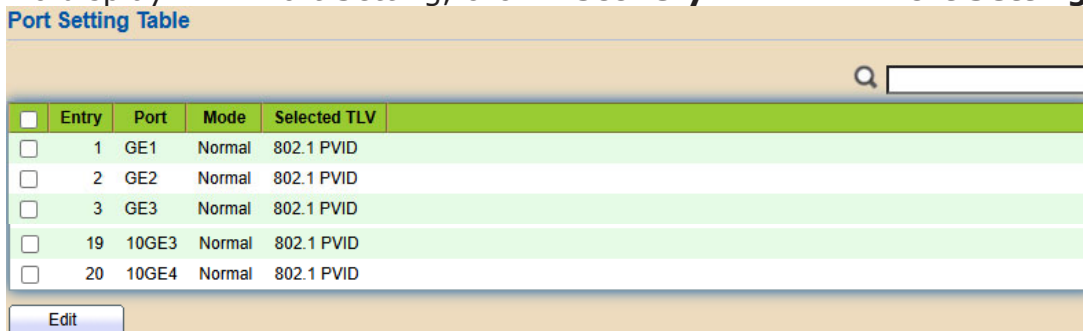

Item	Description
State	Enable/ Disable LLDP protocol on this switch.
LLDP Handling	Select LLDP PDU handling action to be filtered, bridging or flooded when LLDP is globally disabled. <ul style="list-style-type: none"><li>Filtering: Deletes the packet.</li><li>Bridging: (VLAN-aware flooding) Forwards the packet to all VLAN members.</li><li>Flooding: Forwards the packet to all ports</li></ul>
TLV Advertise Interval	Select the interval at which frames are transmitted. The default is 30 seconds, and the valid range is 5-32767 seconds.
Hold Multiplier	Select the multiplier on the transmit interval to assign to TTL (range 2-10, default = 4).
Reinitialization Delay	Select the delay before a re-initialization (range 1-10 seconds, default = 2).

Transmit Delay	Select the delay after an LLDP frame is sent (range 1-8191 seconds, default = 2).
Fast Start Repeat Count	Select fast start repeat count when port link up (range 1-10, default = 3).

### 4.7.1.2. Port Setting

To display LLDP Port Setting, click **Discovery > LLDP > Port Setting**

**Port Setting Table**

802.1 TLVs	Total 802.1 TLVs byte size. Status is sent or overloading.
Total	Total number of bytes of LLDP information in each packet.

### 4.7.1.6. Local Information

Use the LLDP Local Information to view LLDP local device information.

To display LLDP Local Device, click **Discovery > LLDP > Local Information**.

The screenshot displays the 'Discovery > LLDP > Local Information' page. It features a 'Device Summary' section with a table of device details and a 'Port Status Table' below it.

Chassis ID Subtype	Chassis ID	System Name	System Description	Supported Capabilities	Enabled Capabilities	Port ID Subtype
MAC address	00:E0:4C:00:00:00	Switch	MS920A	Bridge	Bridge	Local

Entry	Port	LLDP State	LLDP-MED State
<input type="radio"/> 1	GE1	Normal	Disabled
<input type="radio"/> 2	GE2	Normal	Disabled
<input type="radio"/> 3	GE3	Normal	Disabled
<input type="radio"/> 19	10GE3	Normal	Disabled
<input type="radio"/> 20	10GE4	Normal	Disabled

A 'Detail' button is located at the bottom left of the port status table.

Figure 85 - Discovery > LLDP > Local Information

Item	Description
Chassis ID Subtype	Type of chassis ID, such as the MAC address.
Chassis ID	Identifier of chassis. Where the chassis ID subtype is a MAC address, the MAC address of the switch is displayed.
System Name	Name of switch.

System Description	Description of the switch.
Supported Capabilities	Primary functions of the device, such as Bridge, WLAN AP, or Router.
Enabled Capabilities	Primary enabled functions of the device.
Port ID Subtype	Type of the port identifier that is shown.
LLDP State	LLDP Tx and Rx abilities.
LLDP-MED State	LLDP MED enable state.

Click “Detail” button on the page to view detail information of the selected port.

<input type="checkbox"/>	19	10GE3	0	0	0	0	0	0	0
<input type="checkbox"/>	20	10GE4	0	0	0	0	0	0	0

Figure 89 - Discovery > LLDP > Statistics

Item	Description
Insertions	The number of times the complete set of information advertised by a particular MAC Service Access Point (MSAP) has been inserted into tables associated with the remote systems.
Deletions	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems.
Drops	The number of times the complete set of information advertised by MSAP could not be entered into tables associated with the remote systems because of insufficient resources.
Age Outs	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems because the information timeliness interval has expired.
<b>Statistics Table</b>	
Port	Interface or port number.
Transmit Frame Total	Number of LLDP frames transmitted on the corresponding port.
Receive Frame Total	Number of LLDP frames received by this LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive Frame Discard	Number of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.

Receive Frame Error	Number of invalid LLDP frames received by the LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive TLV Discard	Number of TLVs of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive TLV Unrecognized	Number of TLVs of LLDP frames that are unrecognized while the LLDP agent is enabled.
Neighbor Timeout	Number of age out LLDP frames.

## 4.8. Multicast

Use this section to configure Multicast.

### 4.8.1. General

Use the General pages to configure settings of IGMP and MLD common function.

#### 4.8.1.1. Property

To display multicast general property Setting web page, click **Multicast> General> Property**

The screenshot displays the configuration interface for Multicast settings. It is divided into two main sections: 'Unknown Multicast Action' and 'Multicast Forward Method'.

**Unknown Multicast Action:** This section has a green dashed border. It contains three radio button options: 'Flood' (selected), 'Drop', and 'Forward to Router Port'.

**Multicast Forward Method:** This section has a green header bar. It contains two sub-sections, one for 'IPv4' and one for 'IPv6', each with a green dashed border. Each sub-section contains two radio button options: 'DMAC-VID' (selected) and 'DIP-VID'.

At the bottom left of the configuration area is an 'Apply' button.

Figure 90 - Multicast > General > Property

Item	Description
Unknown Multicast Action	Set the unknown multicast action <ul style="list-style-type: none"> <li>Flood: flood the unknown multicast data.</li> <li>Drop: drop the unknown multicast data.</li> <li>Router port: forward the unknown multicast data to router port.</li> </ul>
IPv4	Set the ipv4 multicast forward method. <ul style="list-style-type: none"> <li>MAC-VID: forward method DMAC+VID.</li> <li>DIP-VID: forward method DIP+VID.</li> </ul>

IPv6	Set the ipv6 multicast forward method. <ul style="list-style-type: none"> <li>• MAC-VID: forward method DMAC+VID.</li> <li>• DIP-VID: forward method DIP+VIP (DIP is ipv6 low 32 bit).</li> </ul>
------	---

### 4.8.1.2. Group Address

This page allow user to browse all multicast groups that dynamic learned or statically added.

To display Multicast General Group web page, click **Multicast> General> Group Address**

Figure 91 - Multicast > General > Group Address

Item	Description
IP Version	IP Version <ul style="list-style-type: none"> <li>• IPv4: ipv4 multicast group</li> <li>• IPv6: ipv6 multicast group</li> </ul>
VLAN	The VLAN ID of group.
Group Address	The group IP address.
Member	The member ports of group.
Type	The type of group. Static or Dynamic.
Life (Sec)	The life time of this dynamic group.

Click “Add” or “Edit” button to view Add or Edit Group Address menu.

### 4.8.1.5. Throttling

This page allow user to configure port can learned max group number and if port group number arrived max group number action

To display multicast max-group number and action setting web page, click **Multicast> General> Throttling**

**Throttling Table**

IP Version

Q

<input type="checkbox"/>	Entry	Port	Max Group	Exceed Action
<input type="checkbox"/>	1	GE1	256	Deny
<input type="checkbox"/>	2	GE2	256	Deny
<input type="checkbox"/>	3	GE3	256	Deny
<input type="checkbox"/>	27	LAG7	256	Deny
<input type="checkbox"/>	28	LAG8	256	Deny

Figure 97 - Multicast > General > Throttling

Item	Description
IP Version	IP Version · ● IPv4: ipv4 for IGMP snooping throttling · ● IPv6: ipv6 for MLD snooping throttling
Entry	Entry of number
Port	Port Name
Max Group	Max number of group for port

Exceed Action	Display the port exceed max number group learning group action
---------------	--

Click "Edit" button to view Edit Throttling menu.

Figure 98 - Multicast > General > Edit Throttling

Item	Description
Port	Display the selected port list
IP Version	Display the selected IP version
Max Group	Max number of group for port
Exceed Action	Excess Max number of port learning group action . <ul style="list-style-type: none"> <li>● Deny: do not learning group. .</li> <li>● Replace: random replace one exist group</li> </ul>

#### 4.8.1.6. Filtering Profile

This page allow user to add, edit or delete profile for IGMP or MLD snooping.

To display Multicast Profile Setting web page, click **Multicast> General> Filtering Profile**

Figure 99 - Multicast > General > Filtering Profile

Item	Description
IP Version	IP version: . <ul style="list-style-type: none"> <li>● IPv4: IGMP snooping profile .</li> <li>● IPv6: MLD snooping profile</li> </ul>

Profile ID	profile ID
Start Address	The start group address of profile Display
End Address	The end group address of profile
Action	Display profile action

Click "Add" or "Edit" button to view Add/Edit profile menu.

The image shows two configuration windows side-by-side. The top window is titled 'Add Profile' and contains a form with the following fields: 'Profile ID' (a text box with '(1 - 128)' next to it), 'IP Version' (a dropdown menu showing 'IPv4'), 'Start Address' (a text box), 'End Address' (a text box), and 'Action' (radio buttons for 'Allow' and 'Deny', with 'Allow' selected). Below the form are 'Apply' and 'Close' buttons. The bottom window is titled 'Edit Profile' and contains a similar form with pre-filled values: 'Profile ID' is '1', 'IP Version' is 'IPv4', 'Start Address' is '225.0.0.1', 'End Address' is '225.0.0.3', and 'Action' is 'Allow' (selected). It also has 'Apply' and 'Close' buttons.

Figure 100 - Multicast > General > Add/Edit Filtering Profile

Item	Description
Profile ID	profile ID
IP Version	IP version: • • IPv4: IGMP snooping profile • • IPv6: MLD snooping profile
Start Address	The start group address of profile Display
End Address	The end group address of profile
Action	The action of profile: • • Allow: permit all packets that match the profile. • • Deny: deny all packets that match the profile.

### 4.8.1.7. Filtering Binding

This page allow user to bind/remove profile for each port.

To display Multicast port filter binding profile web page, click **Multicast> General> Filtering Binding**

	Entry	Port	Profile ID
<input type="checkbox"/>	1	GE1	
<input type="checkbox"/>	2	GE2	
<input type="checkbox"/>	3	GE3	
<input type="checkbox"/>	27	LAG7	
<input type="checkbox"/>	28	LAG8

Figure 104 - Multicast > IGMP Snooping > Property > Edit VLAN Setting

Item	Description
VLAN	The selected VLAN List.

State	Set the enabling status of IGMP Snooping VLAN functionality <ul style="list-style-type: none"> <li>• Enable: If Checked Enable IGMP Snooping VLAN, else is Disabled IGMP Snooping VLAN.</li> </ul>
Router Port Auto Learn	Set the enabling status of IGMP Snooping router port learning <ul style="list-style-type: none"> <li>• Enable: If checked Enable learning router port by query and PIM, DVRMP, else Disable the learning router port.</li> </ul>
Immediate leave	Immediate Leave the group when receive IGMP Leave message. <ul style="list-style-type: none"> <li>• Enable: If checked Enable immediate leave, else disable immediate leave.</li> </ul>
Query Robustness	The Admin Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The admin interval of querier to send general query.
Query Max Response Interval	The admin query max response interval, In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query Counter	The admin last member query count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The admin last member query interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
<b>Operational Status</b>	
Status	Operational IGMP snooping status, must both IGMP snooping global and IGMP snooping enable the status will be enable.
Query Robustness	Operational Query Robustness.
Query Interval	Operational Query Interval.
Query Max Response Interval	Operational Query Max Response Interval
Last Member Query Counter	Operational Last Member Query Count.
Last Member Query Interval	Operational Last Member Query Interval.

#### 4.8.2.2. Querier

This page allow user to configure querier settings on specific VLAN of IGMP Snooping.

To display IGMP Snooping Querier Setting web page, click **Multicast> IGMP Snooping> Querier**

VLAN	State	Operational Status	Version	Querier Address
1	Disabled	Disabled		

Figure 105 - Multicast > IGMP Snooping > Querier

Item	Description
VLAN	IGMP Snooping querier entry VLAN ID.
State	The IGMP Snooping querier Admin State.
Operational Status	The IGMP Snooping querier operational status.
Querier Version	The IGMP Snooping querier operational version.
Querier Address	The operational Querier IP address on the VLAN.

Click "Edit" button to view Edit Querier menu.

Figure 106 - Multicast > IGMP Snooping > Querier > Edit Querier

Item	Description
VLAN	The Selected Edit IGMP Snooping querier VLAN List.
State	Set the enabling status of IGMP Querier Election on the chose VLANs <ul style="list-style-type: none"> <li>Enabled: if checked Enable IGMP Querier else Disable IGMP Querier.</li> </ul>
Version	Set the query version of IGMP Querier Election on the chose VLANs <ul style="list-style-type: none"> <li>IGMPv2: Querier version 2.</li> <li>IGMPv3: Querier version 3. (IGMP Snooping version should be IGMPv3)</li> </ul>

### 4.8.2.3. Statistics

This page allow user to clear IGMP snooping statics.

To display IGMP Snooping Statistics, click **Multicast> IGMP Snooping> Statistics**

Receive Packet		
Total		59
Valid		1
InValid		58
Other		0
Leave		0

Source-specific Group Query		0

Figure 107 - Multicast > IGMP Snooping > Statistics

Item	Description
<b>Receive Packet</b>	
Total	Total RX IGMP packet, include ipv4 multicast data to CPU.
Valid	The valid IGMP snooping process packet.
InValid	The invalid IGMP snooping process packet.
Other	The ICMP protocol is not 2, and is not ipv4 multicast data packet.
Leave	IGMP leave packet.
Report	IGMP join and report packet.
General Query	IGMP General Query packet.
Special Group Query	IGMP Special Group General Query packet.
Source-specific Group Query	IGMP Special Source and Group General Query packet.

Transmit Packet	
Leave	IGMP leave packet
Report	IGMP join and report packet
General Query	IGMP general query packet include querier transmit general query packet.
Special Group Query	IGMP special group query packet include querier transmit special group query packet.
Source-specific Group Query	IGMP Special Source and Group General Query packet.

### 4.8.3. MLD Snooping

Use the MLD Snooping pages to configure settings of MLD snooping function.

#### 4.8.3.1. Property

This page allow user to configure global settings of MLD snooping and configure specific VLAN settings of MLD Snooping.

To display MLD Snooping global setting and VLAN Setting web page, click **Multicast> MLD Snooping> Property**

State ☐ Enable

Item	Description
State	Set the enabling status of IGMP Snooping functionality <ul style="list-style-type: none"> <li>● Enable: If Checked Enable IGMP Snooping, else is Disabled IGMP Snooping.</li> </ul>
Version	Set the MLD snooping version . <ul style="list-style-type: none"> <li>● MLDv1: Only support process MLD v1 packet. .</li> <li>● MLDv2: Support v2 basic and v1</li> </ul>

Report Suppression	Set the enabling status of MLD v1 report suppression <ul style="list-style-type: none"> <li>● Enable: If Checked Enable MLD Snooping v1 report suppression, else Disable the report suppression function</li> </ul>
VLAN	The MLD entry VLAN ID
Operation Status	The enable status of MLD snooping VLAN functionality
Router Port Auto Learn	The enabling status of MLD snooping router port auto learning.
Query Robustness	The Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The interval of querier to send general query.
Query Max Response Interval	In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query count	The count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Immediate leave	The immediate leave status of the group will immediately leave when receive MLD Leave message.

Click "Edit" button to view Edit VLAN Setting menu.

Figure 109 - Multicast > MLD snooping > Edit VLAN Setting

Item	Description
VLAN	The selected VLAN List
State	Set the enabling status of MLD Snooping VLAN functionality . <ul style="list-style-type: none"> <li>● Enable: If Checked Enable MLD Snooping VLAN, else is Disabled MLD Snooping VLAN.</li> </ul>
Router Port Auto Learn	Set the enabling status of MLD Snooping router port learning . <ul style="list-style-type: none"> <li>● Enable: If checked Enable learning router port by query and PIM, DVRMP, else Disable the learning router port.</li> </ul>
Immediate leave	Immediate Leave the group when receive MLD Leave message. . <ul style="list-style-type: none"> <li>● Enable: If checked Enable immediate leave, else disable immediate leave Immediate leave.</li> </ul>
Query Robustness	The Admin Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The admin interval of querier to send general query.

Query Max Response Interval	The Admin query max response interval, In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query Counter	The admin last member query count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The admin last member query interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Operational Status	
Status	Operational MLD snooping status, must both MLD snooping global and MLD snooping enable the status will be enable.
Query Robustness	Operational Query Robustness.
Query Interval	Operational Query Interval.
Query Max Response Interval	Operational Query Max Response Interval.
Last Member Query Counter	Operational Last Member Query Count.
Last Member Query Interval	Operational Last Member Query Interval.

### 4.8.3.2. Statistics

This page allow user to clear MLD snooping statics.

To display MLD Snooping Statistics, click **Multicast> MLD Snooping> Statistics**

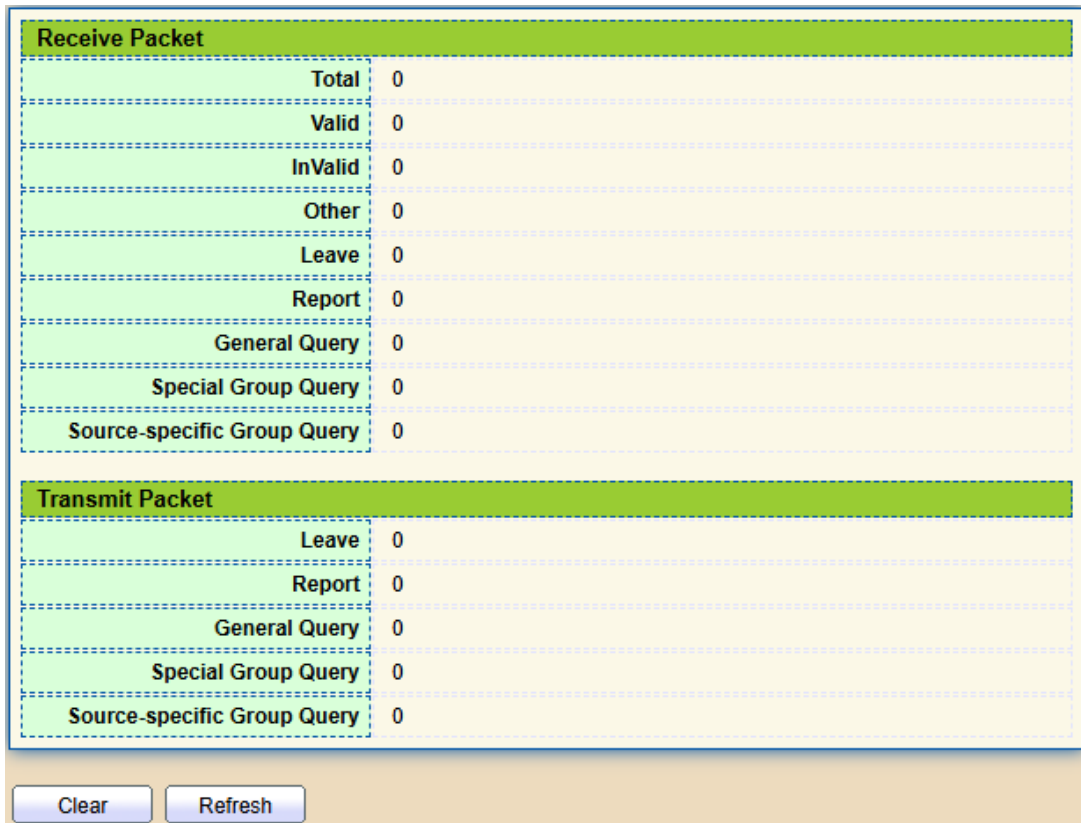

Figure 110 - Multicast > MLD snooping > Statistics

Item	Description
Receive Packet	
Total	Total RX MLD packet, include ipv4 multicast data to CPU.
Valid	The valid MLD snooping process packet.
In Valid	The invalid MLD snooping process packet.
Other	The ICMPV6 type is not MLD, and is not ipv6 multicast data packet, and is not IPV6 router protocol.
Leave	MLD leave packet.
Report	MLD join and report packet.
General Query	MLD General Query packet.
Special Group Query	MLD Special Group General Query packet
Source-specific Group Query	MLD Special Source and Group General Query packet
Transmit Packet	
Leave	MLD leave packet.
Report	MLD join and report packet.

General Query	MLD general query packet.
Special Group Query	MLD special group query packet.
Source-specific Group Query	MLD Special Source and Group General Query packet.

#### 4.8.4. MVR

Use the MVR pages to configure settings of MVR function.

##### 4.8.4.1. Property

To display multicast MVR property Setting web page, click **Multicast> MVR> Property**

Figure 111 - Multicast > MVR > Property

Item	Description
State	<ul style="list-style-type: none"> <li>Enable: if checked enable the MVR state, else disable the MVR state.</li> </ul>
VLAN	The MVR VLAN ID.
Mode	Set the MVR mode <ul style="list-style-type: none"> <li>Compatible: compatible mode.</li> <li>Dynamic: dynamic mode, will learn group member on source port.</li> </ul>
Group Start	MVR group range start.
Group Count	MVR group continue count.
Query Time	MVR query time when receive MVR leave MVR group packet.
Maximum	The max number of MVR group database.

Current	The learned MVR group current time
---------	------------------------------------

#### 4.8.4.2. Port Setting

This page allow user to configure port role and port immediate leave.

To display MVR port role and immediate leave state setting web page, click **Multicast> MVR> Port Setting**

Entry	Port	Role	Immediate Leave
1	GE1	None	Disabled
2	GE2	None	Disabled
3	GE3	None	Disabled
27	LAG7	None	Disabled
28	LAG8	None	Disabled

Figure 112 - Multicast > MVR > Port Setting

Item	Description
Entry	Entry of number.
Port	Port Name.
Role	Port Role for MVR, the type is None/Receiver/Source.
Immediate Leave	Status of immediate leave.

Click "Edit" button to view Edit Port Setting menu.

Port

LAG8

Role

☒ None

Role	MVR port role <ul style="list-style-type: none"> <li>None: port role is none.</li> <li>Receiver: port role is receiver.</li> <li>Source: port role is source.</li> </ul>

Immediate Leave	MVR Port immediate leave <ul style="list-style-type: none"> <li>Enable: if checked is enable immediate leave, else disable immediate leave.</li> </ul>
-----------------	--

### 4.8.4.3. Group Address

This page allow user to browse all multicast MVR groups that dynamic learned or statically added.

To display Multicast MVR Group web page, click **Multicast> MVR> Group Address**

Figure 114 - Multicast > MVR > Group Address

Item	Description
VLAN	The VLAN ID of MVR group.
Group Address	The MVR group IP address.
Member	The member ports of MVR group.
Type	The type of MVR group. Static or Dynamic.
Life (Sec)	The life time of this dynamic MVR group.

Click "Add" button to view Add/Edit Group Address Table menu.

Figure 115 - Multicast > MVR > Group Address > Add Group Address

Item	Description
VLAN	The VLAN ID of MVR group.
Group Address	The MVR group IP address.
Member	<p>The member ports of MVR group.</p> <ul style="list-style-type: none"> <li>Available Port: Optional port member, it is only receiver port when MVR mode is compatible, it includes source port when mode is dynamic.</li> <li>Selected Port: Selected port member</li> </ul>

## 4.9. Security

Use the Security pages to configure settings for the switch security features.

### 4.9.1. RADIUS

This page allow user to add, edit or delete RADIUS server settings and modify default parameter of RADIUS server.

To display RADIUS web page, click **Security > RADIUS**

Figure 116 - Security > RADIUS

Item	Description
Retry	Set default retry number.
Timeout	Set default timeout value.
Key String	Set default RADIUS key string
<b>RADIUS Table</b>	
Server Address	RADIUS server address.
Server Port	RADIUS server port.

Priority	RADIUS server priority (smaller value has higher priority). RADIUS session will try to establish with the server setting which has highest priority. If failed, it will try to connect to the server with next higher priority.
Retry	RADIUS server retry value. If it is failed to connect to server, it will keep trying until timeout with retry times.
Timeout	RADIUS server timeout value. If it is failed to connect to server, it will keep trying until timeout.
Usage	RADIUS server usage type <ul style="list-style-type: none"> <li>• Login: For login authentication.</li> <li>• 802.1x: For 802.1x authentication.</li> <li>• All: For all types.</li> </ul>

Click "Add" or "Edit" button to view Add/Edit RADIUS Server menu.

**Add RADIUS Server**

<b>Address Type</b>	<input checked="" type="radio"/> Hostname <input type="radio"/> IPv4 <input type="radio"/> IPv6

Item	Description
Address Type	In add dialog, user need to specify server Address Type <ul style="list-style-type: none"> <li>● Hostname: Use domain name as server address</li> <li>● IPv4: Use IPv4 as server address</li> <li>● IPv6: Use IPv6 as server address</li> </ul>
Server Address	In add dialog, user need to input server address based on address type. In edit dialog, it shows current edit server address.
Server Port	Set TACACS+ server port
Priority	Set TACACS+ server priority (smaller value has higher priority). TACACS+ session will try to establish with the server setting which has highest priority. If failed, it will try to connect to the server with next higher priority
Key String	Set TACACS+ key string.
Timeout	Set TACACS+ server timeout value. If it is fail to connect to server, it will keep trying until timeout.

### 4.9.3. AAA

#### 4.9.3.1. Method List

This page allow user to add, edit or delete login authentication list settings (The “default” list cannot be deleted.). The line combined to this list will authenticate login user by methods in this list. If the first method is failed, it will try to use the next priority method to authenticate if it exists.

With RADIUS and TACACS+ methods, the failed means connecting to server fail. With Local method, the failed means cannot find the user in local database.

To display Method List web page, click **Security > AAA > Method List**

**Method List Table**

Showing  entries      Showing 1 to 1 of 1 entries     

<input type="checkbox"/>	Name	Sequence
<input type="checkbox"/>	default	(1) Local

Figure 120 - Security > TACACS+>AAA> Method List

Item	Description
Name	Login authentication list name. This name should be different from other existing lists.
Sequence	Priority of login authentication method. <ul style="list-style-type: none"> <li>• None: Authenticated with any condition.</li> <li>• Local: Use local accounts database to authenticate</li> <li>• TACACS+: Use remote TACACS+ server to authenticate.</li> <li>• RADIUS: Use remote Radius server to authenticate.</li> <li>• Enable: Use local enable password to authenticate.</li> </ul>

Click "Add" or "Edit" button to view Add/Edit Method List menu.

Method 4: ☒ Empty ☐ None ☐ Local ☐ Enable ☐ RADIUS ☐ TACACS+

Figure 121 - Security > TACACS+>AAA> Add/Edit Method List

Item	Description
Name	Login authentication list name. This name should be different from other existing lists.
Method 1	Select first priority of login authentication method. <ul style="list-style-type: none"> <li>• None: Authenticated with any condition.</li> <li>• Local: Use local accounts database to authenticate</li> <li>• TACACS+: Use remote TACACS+ server to authenticate.</li> <li>• RADIUS: Use remote Radius server to authenticate.</li> <li>• Enable: Use local enable password to authenticate</li> </ul>

Method 2	Select second priority of login authentication method. • <ul style="list-style-type: none"> <li>• None: Authenticated with any condition</li> <li>• Local: Use local accounts database to authenticate</li> <li>• TACACS+: Use remote TACACS+ server to authenticate.</li> <li>• RADIUS: Use remote Radius server to authenticate</li> <li>• Enable: Use local enable password to authenticate</li> </ul>
Method 3	Select third priority of login authentication method. • <ul style="list-style-type: none"> <li>• None: Authenticated with any condition. •</li> <li>• Local: Use local accounts database to authenticate</li> <li>• TACACS+: Use remote TACACS+ server to authenticate.</li> <li>• RADIUS: Use remote Radius server to authenticate.</li> <li>• Enable: Use local enable password to authenticate</li> </ul>
Method 4	Select fourth priority of login authentication method. • <ul style="list-style-type: none"> <li>• None: Authenticated with any condition. •</li> <li>• Local: Use local accounts database to authenticate</li> <li>• TACACS+: Use remote TACACS+ server to authenticate.</li> <li>• RADIUS: Use remote Radius server to authenticate.</li> <li>• Enable: Use local enable password to authenticate</li> </ul>

### 4.9.3.2. Login Authentication

This page allow user to combine AAA login authentication list to all management interfaces.

To display the login authentication combined web page, click **Security > AAA > Login Authentication**.

Console	default ▼	(1) Local
Telnet	default ▼	(1) Local
SSH	default ▼	(1) Local
HTTP	default ▼	(1) Local
HTTPS	default ▼	(1) Local

Apply

Figure 122 - Security > TACACS+>AAA> login authentication

Item	Description
Console	Specify login authentication list combined on console.
Telnet	Specify login authentication list combined on Telnet.
SSH	Specify login authentication list combined on SSH.
HTTP	Specify login authentication list combined on HTTP.
HTTPS	Specify login authentication list combined on HTTPS.

## 4.9.4. Management Access

Use the Management Access pages to configure settings of management access.

### 4.9.4.1. Management VLAN

This page allow user to change management VLAN.

To display Management VLAN page, click **Security > Management Access > Management VLAN**

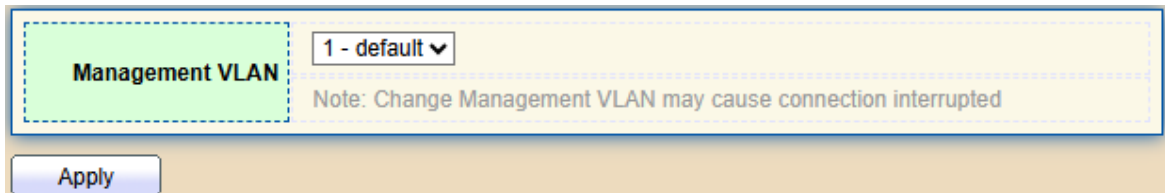

Figure 123 - Security > Management Access > Management VLAN

Item	Description
Management VLAN	Select management VLAN in option list. Management connection, such as http, https, SNMP etc., has the same VLAN of management VLAN are allow connecting to device. Others will be dropped.

### 4.9.4.2. Management Service

This page allow user to change management services related configurations.

To display Management Service, click **Security > Management Access > Management Service**

Management Service		
Telnet	<input type="checkbox"/>	Enable
SSH	<input type="checkbox"/>	Enable
HTTP	<input checked="" type="checkbox"/>	Enable
HTTPS	<input type="checkbox"/>	Enable
SNMP	<input checked="" type="checkbox"/>	Enable

Session Timeout		
Console	<input type="text" value="10"/>	Min (0 - 65535, default 10)
Telnet	<input type="text" value="10"/>	Min (0 - 65535, default 10)
SSH	<input type="text" value="10"/>	Min (0 - 65535, default 10)
HTTP	<input type="text" value="10"/>	Min (0 - 65535, default 10)
HTTPS	<input type="text" value="10"/>	Min (0 - 65535, default 10)

Password Retry Count		
Console	<input type="text" value="3"/>	(0 - 120, default 3)

Figure 129 - Security &gt; Authentication Manager &gt; Port Setting

Item	Description
Port	Port
Port Control	<p>Support following authentication port control types.</p> <ul style="list-style-type: none"> <li>• Disable: Disable authentication function and all clients have network accessibility.</li> <li>• Force Authorized: Port is force authorized and all clients have network accessibility.</li> <li>• Force Unauthorized: Port is force unauthorized and all clients have no network accessibility.</li> <li>• Auto: Need passing authentication procedure to get network accessibility.</li> </ul>
Reauthentication	<p>Reauthenticate state</p> <ul style="list-style-type: none"> <li>• Enabled: Host will be reauthenticated after reauthentication period.</li> <li>• Disabled: Host will not be reauthenticated after reauthentication period.</li> </ul>
Max Hosts	In Multiple Authentication mode, total host number cannot not exceed max host number.
Common Timer (Reauthentication)	After re-authenticate period, host will return to initial state and need to pass authentication procedure again.
Common Timer (Inactive)	If no packet from the authenticated host, the inactive timer will increase. After inactive timeout, the host will be unauthorized and corresponding session will be deleted. In multi-host mode, the packet is counting on the authorized host only.
Common Timer (Quiet)	When port is in Locked state after authenticating fail several times, the host will be locked in quiet period. After this quiet period, the host is allowed to authenticate again.
802.1X Params (TX Period)	Number of seconds that the device waits for a response to an Extensible Authentication Protocol (EAP) request/identity frame from the supplicant (client) before resending the request.

802.1X Params (Supplicant Timeout)	The maximum number of EAP requests that can be sent. If a response is not received after the defined period (supplicant timeout), the authentication process is restarted.
802.1X Params (Server Timeout)	Number of seconds that lapses before EAP requests are resent to the supplicant.
802.1X Params (Max Request)	Number of seconds that lapses before the device resends a request to the authentication server.
Web-Based Parameters (Max Login)	Allow user login fail number. After login fail number exceed, the host will enter Lock state and is not able to authenticate until quiet period exceed.

Click "Edit" button to view Edit Port Setting menu.

IFG	Select the rate calculates w/o preamble & IFG (20 bytes) <ul style="list-style-type: none"> <li>Exclude: exclude preamble &amp; IFG (20 bytes) when count ingress storm control rate.</li> <li>Include: include preamble &amp; IFG (20 bytes) when count ingress storm control rate.</li> </ul>

Click "Edit" button to view Edit Port Setting menu.

Figure 141 - Security > Storm Control > Edit Port Setting

Item	Description
Port	Select the setting ports.
State	Select the state of setting <ul style="list-style-type: none"> <li>Enable: Enable the storm control function.</li> </ul>
Broadcast	Enable: Enable the storm control function of Broadcast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.
Unknown Multicast	Enable: Enable the storm control function of Unknown multicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.

Unknown Unicast	Enable: Enable the storm control function of Unknown unicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1 - 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.
Action	Select the state of setting <ul style="list-style-type: none"> <li>• Drop: Packets exceed storm control rate will be dropped.</li> <li>• Shutdown: Port will be shutdown when packets exceed storm control rate.</li> </ul>

## 4.9.9. DoS

A Denial of Service (DoS) attack is a hacker attempt to make a device unavailable to its users. DoS attacks saturate the device with external communication requests, so that it cannot respond to legitimate traffic. These attacks usually lead to a device CPU overload.

The DoS protection feature is a set of predefined rules that protect the network from malicious attacks. The DoS Security Suite Settings enables activating the security suite.

### 4.9.9.1. Property

To display Dos Global Setting web page, click **Security > Dos > Property**

POD	<input checked="" type="checkbox"/> Enable
Land	<input checked="" type="checkbox"/> Enable
UDP Blat	<input checked="" type="checkbox"/> Enable
TCP Blat	<input checked="" type="checkbox"/> Enable

X-Mas Scan Attack	<input checked="" type="checkbox"/> Enable
TCP SYN-FIN Attack	<input checked="" type="checkbox"/> Enable
TCP SYN-RST Attack	<input checked="" type="checkbox"/> Enable
ICMP Fragment	<input checked="" type="checkbox"/> Enable
TCP-SYN	<input checked="" type="checkbox"/> Enable Note: Source Port < 1024
TCP Fragment	<input checked="" type="checkbox"/> Enable Note: Offset = 1
Ping Max Size	<input checked="" type="checkbox"/> Enable IPv4 <input checked="" type="checkbox"/> Enable IPv6 <input type="text" value="512"/> Byte (0 - 65535, default 512)
TCP Min Hdr size	<input checked="" type="checkbox"/> Enable <input type="text" value="20"/> Byte (0 - 31, default 20)
IPv6 Min Fragment	<input checked="" type="checkbox"/> Enable <input type="text" value="1240"/> Byte (0 - 65535, default 1240)
Smurf Attack	<input checked="" type="checkbox"/> Enable <input type="text" value="0"/> Netmask Length (0 - 32, default 0)

Apply

Figure 142 - Security > DoS > Property

Item	Description
POD	Avoids ping of death attack.
Land	Drops the packets if the source IP address is equal to the destination IP address.
UDP Blat	Drops the packets if the UDP source port equals to the UDP destination port.
TCP Blat	Drops the packages if the TCP source port is equal to the TCP destination port.
DMAC = SMAC	Drops the packets if the destination MAC address is equal to the source MAC address.
Null Scan Attack	Drops the packets with NULL scan.
X-Mas Scan Attack	Drops the packets if the sequence number is zero, and the FIN, URG and PSH bits are set.

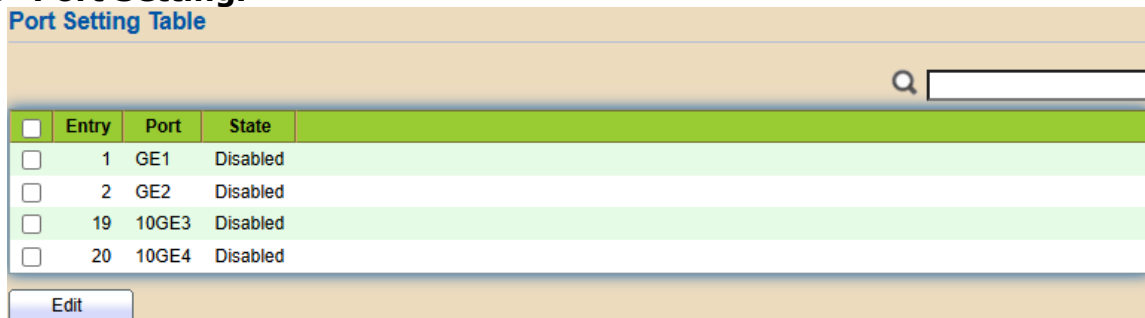

TCP SYN-FIN Attack	Drops the packets with SYN and FIN bits set.
TCP SYN-RST Attack	Drops the packets with SYN and RST bits set
ICMP Fragment	Drops the fragmented ICMP packets.
TCP SYN (SPORT<1024)	Drops SYN packets with sport less than 1024.
TCP Fragment (Offset = 1)	Drops the TCP fragment packets with offset equals to one.
Ping Max Size	Specify the maximum size of the ICMPv4/ICMPv6 ping packets. The valid range is from 0 to 65535 bytes, and the default value is 512 bytes.
IPv6 Min Fragment	Checks the minimum size of IPv6 fragments, and drops the packets smaller than the minimum size. The valid range is from 0 to 65535 bytes, and default value is 1240 bytes.
Smurf Attack	Avoids Smurf attack. The length range of the netmask is from 0 to 323 bytes, and default length is 0 bytes.

#### 4.9.9.2. Port Setting

To configure and display the state of DoS protection for interfaces, click **Security > DoS > Port Setting**.

Port Setting Table

<input type="checkbox"/>	Entry	Port	State
<input type="checkbox"/>	1	GE1	Disabled
<input type="checkbox"/>	2	GE2	Disabled
<input type="checkbox"/>	19	10GE3	Disabled
<input type="checkbox"/>	20	10GE4	Disabled

Edit

Figure 143 - Security > DoS > Port Setting

Item	Description
Port	Interface or port number.
State	Enable/Disable the DoS protection on the interface.

#### 4.9.10. Dynamic ARP Inspection

Use the Dynamic ARP Inspection pages to configure settings of Dynamic ARP Inspection

### 4.9.10.1. Property

This page allow user to configure global and per interface settings of Dynamic ARP Inspection.

To display property page, click **Security > Dynamic ARP Inspection > Property**

State ☐ Enable

<input type="checkbox"/>	28	LAG8	Disabled	Disabled	Disabled	Disabled	Unlimited	

Edit

Figure 144 - Security > Dynamic ARP Inspection > Property

Item	Description
State	Set checkbox to enable/disable Dynamic ARP Inspection function.
VLAN	Select VLANs in left box then move to right to enable Dynamic ARP Inspection. Or select VLANs in right box then move to left to disable Dynamic ARP Inspection.
Port	Display port ID.
Trust	Display enable/disabled trust attribute of interface.
Source MAC Address	Display enable/disabled source mac address validation attribute of interface.
Destination MAC Address	Display enable/disabled destination mac address validation attribute of interface.
IP Address	Display enable/disabled IP address validation attribute of interface. Allow zero which means allow 0.0.0.0 IP address.
Rate Limit	Display rate limitation value of interface.

Click "Edit" button to view Edit Port Setting menu.

Item	Description
Port	Display selected port to be edited.
Trust	Set checkbox to enable/disable trust of interface. All ARP packet will be forward directly if enable trust. Default is disabled.
Source MAC Address	Set checkbox to enable or disable source mac address validation of interface. All ARP packets will be checked whether sender mac is same as source mac in Ethernet header if enable source mac address validation. Default is disabled.
Destination MAC Address	Set checkbox to enable or disable destination mac address validation of interface. All ARP packets will be checked whether target mac is same as destination mac in Ethernet header if enable destination mac address validation. Default is disabled.
IP Address	Set checkbox to enable or disable IP address validation of interface. All ARP packets will be checked whether IP address is 0.0.0.0, 255.255.255.255 or multicast address. Default is disabled.
IP Address - Allow Zero	Set checkbox to enable or disable allow zero of IP address validation. 0.0.0.0 IP address is valid if allow zero enable. Default is disabled.
Rate Limit	Input rate limitation of ARP packets. The unit is pps. 0 means unlimited. Default is unlimited.

Figure 145 - Security > Dynamic ARP Inspection > Property>Edit Port Setting

Item	Description
Port	Display selected port to be edited.
Trust	Set checkbox to enable/disable trust of interface. All ARP packet will be forward directly if enable trust. Default is disabled.
Source MAC Address	Set checkbox to enable or disable source mac address validation of interface. All ARP packets will be checked whether sender mac is same as source mac in Ethernet header if enable source mac address validation. Default is disabled.
Destination MAC Address	Set checkbox to enable or disable destination mac address validation of interface. All ARP packets will be checked whether target mac is same as destination mac in Ethernet header if enable destination mac address validation. Default is disabled.
IP Address	Set checkbox to enable or disable IP address validation of interface. All ARP packets will be checked whether IP address is 0.0.0.0, 255.255.255.255 or multicast address. Default is disabled.
IP Address - Allow Zero	Set checkbox to enable or disable allow zero of IP address validation. 0.0.0.0 IP address is valid if allow zero enable. Default is disabled.
Rate Limit	Input rate limitation of ARP packets. The unit is pps. 0 means unlimited. Default is unlimited.

#### 4.9.10.2. Statistics

This page allow user to browse all statistics that recorded by Dynamic ARP Inspection function.

To display Statistics page, click **Security > Dynamic ARP Inspection > Statistics**

**Statistics Table**

Item	Description
State	Set checkbox to enable/disable DHCP Snooping function.
VLAN	Select VLANs in left box then move to right to enable DHCP Snooping. Or select VLANs in right box then move to left to disable DHCP Snooping.
<b>Port Setting Table</b>	
Port	Display port ID.
Trust	Display enable/disabled trust attribute of interface.
Verify Chaddr	Display enable/disabled chaddr validation attribute of interface.
Rate Limit	Display rate limitation value of interface.

Click "Edit" button to view Edit Port Setting menu.

**Edit Port Setting**

Port: GE1

Trust: ☐ Enable

Verify Chaddr: ☐ Enable

Rate Limit:  pps (0 - 300, default 0), 0 is Unlimited

Apply Close

Figure 148 - Security > DHCP Snooping > Property > Edit Port Setting

Item	Description
Port	Display selected port to be edited
Trust	Set checkbox to enable/disable trust of interface. All DHCP packet will be forward directly if enable trust. Default is disabled.
Verify Chaddr	Set checkbox to enable or disable chaddr validation of interface. All DHCP packets will be checked whether client hardware mac address is same as source mac in Ethernet header if enable chaddr validation. Default is disabled.
Rate Limit	Input rate limitation of DHCP packets. The unit is pps. 0 means unlimited. Default is unlimited.

## 4.9.11.2. Statistics

This page allow user to browse all statistics that recorded by DHCP snooping function.

To view the Statistics menu, navigate to Security > DHCP Snooping > Statistics.

**Statistics Table**

<input type="checkbox"/>	Entry	Port	Forward	Chaddr Check Drop	Untrust Port Drop	Untrust Port with Option82 Drop	Invalid Drop	
<input type="checkbox"/>	1	GE1	0	0	0	0	0	
<input type="checkbox"/>	2	GE2	0	0	0	0	0	
<input type="checkbox"/>	3	GE3	0	0	0	0	0	
<input type="checkbox"/>	27	LAG7	0	0	0	0	0	
<input type="checkbox"/>	28	LAG8	0	0	0	0	0	

Figure 149 - Security > DHCP Snooping > Statistics

Item	Description
Port	Display port ID.
Forwarded	Display how many packets forwarded normally.
Chaddr Check Drop	Display how many packets dropped by chaddr validation.
Untrust Port Drop	Display how many DHCP server packets that are received by untrusted port dropped.
Untrust Port with Option82	Display how many packets dropped by untrusted port with option82 checking.
Invalid Drop	Display how many packets dropped by invalid checking.

# 4.9.11.3. Option82 Property

This page allow user to set string of DHCP option82 remote ID filed. The string will attach in option82 if option inserted.

To display Option82 Property page, click **Security > DHCP Snooping > Option82 Property**

Entry	Port	State	Allow Untrust
1	GE1	Disabled	Drop
2	GE2	Disabled	Drop
3	GE3	Disabled	Drop
27	LAG7	Disabled	Drop
28	LAG8	Disabled	Drop

Figure 150 - Security > DHCP Snooping > Option82 Property

Item	Description
User Defined	Set checkbox to enable user-defined remote-ID. By default, remote ID is switch mac in byte order.
Remote ID	Input user-defined remote ID. Only available when enable user-define remote ID.
Port Setting Table	
Port	Display port ID.
State	Display option82 enable/disable status of interface.
Allow untrusted	Display allow untrusted action of interface.

Click "Edit" button to view Edit Port Setting menu.

Port	LAG8
State	<input type="checkbox"/> Enable
Allow Untrust	<input type="radio"/> Keep <input checked="" type="radio"/> Drop <input type="radio"/> Replace

Figure 151 - Security > DHCP Snooping > Option82 Property > Edit Port Setting

Item	Description
Port	Display selected port to be edited
State	Set checkbox to enable/disable option82 function of interface.
Allow untrust	Select the action perform when untrusted port receive DHCP packet has option82 filed. Default is drop. <ul style="list-style-type: none"> <li>• Keep: Keep original option82 content.</li> <li>• Replace: Replace option82 content by switch setting</li> <li>• Drop: Drop packets with option82</li> </ul>

#### 4.9.11.4. Option82 Circuit ID

This page allow user to set string of DHCP option82 circuit ID filed. The string will attach in option82 if option inserted.

To display Option82 Circuit ID page, click **Security > DHCP Snooping > Option82 Circuit ID**

Figure 152 - Security > DHCP Snooping > Option82 Circuit ID

Item	Description
Port	Display port ID of entry.
VLAN	Display associate VLAN of entry.
Circuit ID	Display circuit ID string of entry.

Click “Add” button or "Edit" button to view the Add/Edit Option82 Circuit ID menu.

Figure 153 - Security > DHCP Snooping > Option82 Circuit ID  
> Add/Edit Option82 Circuit ID

Item	Description
Port	Select port from list to associate to CID entry. Only available on Add dialog.
VLAN	Input VLAN ID to associate to circuit ID entry. VLAN ID is not mandatory. Only available on Add dialog.
Circuit ID	Input String as circuit ID. Packets match port and VLAN will be inserted circuit ID.

## 4.9.12. IP Source Guard

Use the IP Source Guard pages to configure settings of IP Source Guard.

### 4.9.12.1. Port Setting

Use the IP Source Guard pages to configure settings of IP Source Guard.

To display Port Setting page, click **Security > IP Source Guard > Port Setting**

Port Setting Table

<input type="checkbox"/>	Entry	Port	State	Verify Source	Current Entry	Max Entry
<input type="checkbox"/>	1	GE1	Disabled	IP	0	Unlimited
<input type="checkbox"/>	2	GE2	Disabled	IP	0	Unlimited
<input type="checkbox"/>	3	GE3	Disabled	IP	0	Unlimited
<input type="checkbox"/>	27	LAG7	Disabled	IP	0	Unlimited
<input type="checkbox"/>	28	LAG8	Disabled	IP	0	Unlimited

Edit

Figure 154 - Security > IP Source Guard > Port Setting

Item	Description
Port	Display port ID.
State	Display IP Source Guard enable/disable status of interface.
Verify Source	Display mode of IP Source Guard verification

Current Entry	Display current binding entries of an interface.
Max Entry	Display the number of maximum binding entry of interface.

Click "Edit" button to view the Edit Port Setting menu.

Figure 155 - Security > IP Source Guard > Port Setting > Edit Port Setting

Item	Description
Port	Display selected port to be edited.
Status	Set checkbox to enable or disable IP Source Guard function. Default is disabled.
Verify Source	Select the mode of IP Source Guard verification <ul style="list-style-type: none"> <li>IP: Only verify source IP address of packet.</li> <li>IP-MAC: Verify source IP and source MAC address of packet.</li> </ul>
Max Entry	Input the maximum number of entries that a port can be bounded. Default is un-limited on all ports. No entry will be bound if limitation reached.

### 4.9.12.2. IMPV Binding

This page allow user to add static IP source guard entry and browse all IP source guard entries that learned by DHCP snooping or statically create by user.

To display IPMV Binding page, click **Security > IP Source Guard > IMPV Binding**

Figure 156 - Security > IP Source Guard > IMPV Binding

Item	Description
Port	Display port ID of entry.
VLAN	Display VLAN ID of entry.
MAC Address	Display MAC address of entry. Only available of IP-MAC binding entry.
IP Address	Display IP address of entry. Mask always to be 255.255.255.255 for IP-MAC binding. IP binding entry display user input.
Binding	Display binding type of entry.
Type	Type of existing binding entry <ul style="list-style-type: none"> <li>Static: Entry added by user.</li> <li>Dynamic: Entry learned by DHCP snooping.</li> </ul>
Lease Time	Lease time of DHCP Snooping learned entry. After lease time entry will be deleted. Only available of dynamic entry.

Click "Add" or "Edit" button to view the Add/Edit IP-MAC-Port-VLAN Binding menu.

The screenshot shows two identical configuration panels stacked vertically. The top panel is titled 'Add IP-MAC-Port-VLAN Binding' and the bottom panel is titled 'Edit IP-MAC-Port-VLAN Binding'. Both panels contain a form with the following fields:

- Port:** A dropdown menu currently showing 'GE1'.
- VLAN:** A text input field with a range '(1 - 4094)' indicated to its right.
- Binding:** Two radio buttons. The first is labeled 'IP-MAC-Port-VLAN' and is selected (indicated by a pink dot). The second is labeled 'IP-Port-VLAN'.
- MAC Address:** A text input field.
- IP Address:** A text input field followed by a mask field containing '255.255.255.255'.

Below each form are two buttons: 'Apply' and 'Close'.

Figure 157 - Security > IP Source Guard > Add/Edit IP-MAC-Port-VLAN Binding

Item	Description
Port	Select port from list of a binding entry.
VLAN	Specify a VLAN ID of a binding entry.

Binding	Select matching mode of binding entry <ul style="list-style-type: none"> <li>IP-MAC-Port-VLAN: packet must match IP address、MAC address、Port and VLAN ID.</li> <li>IP-Port-VLAN: packet must match IP address or subnet、Port and VLAN ID.</li> </ul>
MAC Address	Input MAC address. Only available on IP-MAC-Port-VLAN mode.
IP Address	Input IP address and mask. Mask only available on IP-MAC-Port mode.

### 4.9.12.3. Save Database

This page allow user to configure DHCP snooping database which can backup and restore dynamic DHCP snooping entries.

To display Save Database page, click **Security > DHCP Snooping > Save Database**.

Figure 158 - Security > IP Source Guard > Save Database

Item	Description
Type	Select the type of database agent. <ul style="list-style-type: none"> <li>None: Disable database agent service.</li> <li>Flash: Save DHCP dynamic binding entries to flash.</li> <li>TFTP: Save DHCP dynamic binding entries to remote TFTP server.</li> </ul>
Filename	Input filename for backup file. Only available when selecting type “flash” and “TFTP” .
Address Type	Select the type of TFTP server. <ul style="list-style-type: none"> <li>Hostname: TFTP server address is hostname.</li> <li>IPv4: TFTP server address is IPv4 address</li> </ul>

Server Address	Input remote TFTP server hostname or IP address. Only available when selecting type “TFTP”
Write Delay	Input delay timer for doing backup after change happened. Default is 300 seconds.
Timeout	Input aborts timeout for doing backup failure. Default is 300 seconds.

## 4.10. ACL

Use the ACL pages to configure settings for the switch ACL features.

### 4.10.1. MAC ACL

This page allow user to add or delete ACL rule. A rule cannot be deleted if under binding.

To display MAC ACL page, click **ACL > MAC ACL**

Figure 159 - ACL > MAC ACL

Item	Description
ACL Name	Input MAC ACL name.
ACL Name	Display MAC ACL name.
Rule	Display the number ACE rule of ACL.
Port	Display the port list that bind this ACL.

### 4.10.2. MAC ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under binding. New ACE cannot be added if ACL under binding.

To display MAC ACE page, click **ACL > MAC ACE**

**ACE Table**

ACL Name None

Showing All entries Showing 0 to 0 of 0 entries

Item	Description
ACL Name	Select the ACL name to which an ACE is being added.
Sequence	Display the sequence of ACE.
Action	Display the action of ACE.
Protocol	Display the protocol value of ACE.
Source IP	Display the source IP address and mask of ACE.
Destination IP	Display the destination IP address and mask of ACE.
Source Port	Display single source port or a range of source ports of ACE. Only available when protocol is TCP or UDP.
Destination Port	Display single destination port or a range of destination ports of ACE. Only available when protocol is TCP or UDP.
TCP Flags	Display the TCP flag value if ACE. Only available when protocol is TCP.
Type of Service	Display the ToS value of ACE which could be DSCP or IP Precedence.
ICMP	Display the ICMP type and code of ACE. Only available when protocol is ICMP.

#### 4.10.5. IPv6 ACL

This page allow user to add or delete Ipv6 ACL rule. A rule cannot be deleted if under binding.

To display IPv6 ACL page, click **ACL > IPv6 ACL**

Figure 163 - ACL > IPv6 ACL

Item	Description
ACL Name	Input IPv6 ACL name.
ACL Name	Display IPv6 ACL name.
Rule	Display the number ACE rule of ACL.
Port	Display the port list that bind this ACL.

#### 4.10.6. IPv6 ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under binding. New ACE cannot be added if ACL under binding.

To display IPv6 ACE page, click ACL > IPv6 ACE

Figure 164 - ACL > IPv6 ACE

Item	Description
ACL Name	Select the ACL name to which an ACE is being added.
Sequence	Display the sequence of ACE.
Action	Display the action of ACE.
Protocol	Display the protocol value of ACE.
Source IP	Display the source IP address and mask of ACE.
Destination IP	Display the destination IP address and mask of ACE.
Source Port	Display single source port or a range of source ports of ACE. Only available when protocol is TCP or UDP.
Destination Port	Display single destination port or a range of destination ports of ACE. Only available when protocol is TCP or UDP.

TCP Flags	Display the TCP flag value if ACE. Only available when protocol is TCP.
Type of Service	Display the ToS value of ACE which could be DSCP or IP Precedence.
ICMP	Display the ICMP type and code of ACE. Only available when protocol is ICMP.

### 4.10.7. ACL Binding

This page allow user to bind or unbind ACL rule to or from interface. IPv4 and Ipv6 ACL cannot be bound to the same port simultaneously.

To display ACL Binding page, click **ACL > ACL Binding**

ACL Binding Table

<input type="checkbox"/>	Entry	Port	MAC ACL	IPv4 ACL	IPv6 ACL

Click "Edit" button to view the Edit Port Setting menu.

Figure 168 - QoS > General > Property

Item	Description
Port	Selected port list.
CoS	Set default CoS/802.1p priority value for the selected
Trust	Set checkbox to enable/disable port trust state.
Remarking (CoS)	Set checkbox to enable/disable port CoS remarking.
Remarking (DSCP)	Set checkbox to enable/disable port DSCP remarking.
Remarking (IP Precedence)	Set checkbox to enable/disable port IP Precedence remarking.

### 4.11.1.2. Queue Scheduling

The switch supports eight queues for each interface. Queue number 8 is the highest priority queue.

Queue number 1 is the lowest priority queue. There are two ways of determining how traffic in queues is handled, Strict Priority (SP) and Weighted Round Robin (WRR).

- Strict Priority (SP)–Egress traffic from the highest priority queue is transmitted first. Traffic from the lower queues is processed only after the highest queue has been transmitted, which provide the highest level of priority of traffic to the highest numbered queue.
- Weighted Round Robin (WRR)–In WRR mode the number of packets sent from the queue is proportional to the weight of the queue (the higher the weight, the more frames are sent).

The queuing modes can be selected on the Queue page. When the queuing mode is by Strict Priority, the priority sets the order in which queues are serviced, starting with queue\_8 (the highest priority queue) and going to the next lower queue when each queue is completed.

When the queuing mode is Weighted Round Robin, queues are serviced until their quota has been used up and then another queue is serviced. It is also possible to assign some of the lower queues to WRR, while keeping some of the higher queues in Strict Priority. In this case traffic for the SP queues is always sent before traffic from the WRR queues. After the SP queues have been emptied, traffic from

the WRR queues is forwarded. (The relative portion from each WRR queue depends on its weight).

To display Queue Scheduling web page, click **QoS > General > Queue Scheduling**

**Queue Scheduling Table**

Queue	Method			
	Strict Priority	WRR	Weight	WRR Bandwidth (%)
1	<input checked="" type="radio"/>	<input type="radio"/>	1	
2	<input checked="" type="radio"/>	<input type="radio"/>	2	
3	<input checked="" type="radio"/>	<input type="radio"/>	3

7	<input checked="" type="radio"/>	<input type="radio"/>	13	
8	<input checked="" type="radio"/>	<input type="radio"/>	15	

Apply

Figure 169 - QoS > General > Queue Scheduling

Item	Description
Queue	Queue ID to configure.
Strict Priority	Set queue to strict priority type.
WRR	Set queue to Weight round robin type.
Weight	If the queue type is WRR, set the queue weight for the queue.
WRR Bandwidth	Percentage of WRR queue bandwidth.

### 4.11.1.3. CoS Mapping

The CoS to Queue table determines the egress queues of the incoming packets based on the 802.1p priority in their VLAN tags. For incoming untagged packets, the 802.1p priority will be the default CoS/802.1p priority assigned to the ingress ports. Use the Queues to CoS table to remark the CoS/802.1p priority for egress traffic from each queue.

To display CoS Mapping web page, click **QoS > General > CoS Mapping**

Queue to CoS Mapping	
Queue	Queue ID
CoS	Select CoS value for the queue id.

#### 4.11.1.4. DSCP Mapping

The DSCP to Queue table determines the egress queues of the incoming IP packets based on their DSCP values. The original VLAN Priority Tag (VPT) of the packet is unchanged. Use the Queues to DSCP page to remark DSCP value for egress traffic from each queue.

To display DSCP Mapping web page, click **QoS > General > DSCP Mapping**

DSCP to Queue Mapping

DSCP	Queue	DSCP	Queue	DSCP	Queue	DSCP	Queue

2500000 Kbps (16 - 2500000)

Figure 174 - QoS > Rate Limit > Ingress / Egress Port

Item	Description
<b>Web-based Switch Configuration</b>	

Port	Select port list.
Ingress	Set checkbox to enable/disable ingress rate limit. If ingress rate limit is enabled, rate limit value needs to be assigned.
Egress	Set checkbox to enable/disable egress rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.

### 4.11.2.2. Egress Queue

Egress rate limiting is performed by shaping the output load.

To display Egress Queue web page, click **QoS > Rate Limit > Egress Queue**.

Egress Queue Table

	Entry	Port	Queue 1		Queue 2		Queue 3		Queue 4		Queue 5		Queue 6		Queue 7		Queue 8	
			State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)
<input type="checkbox"/>	1	GE1	Disabled		Disabled		Disabled		Disabled		Disabled		Disabled		Disabled		Disabled

Figure 176 - QoS > Rate Limit > Edit Egress Queue

Item	Description
Queue 1	Set checkbox to enable/disable egress queue 1 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 2	Set checkbox to enable/disable egress queue 2 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 3	Set checkbox to enable/disable egress queue 3 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 4	Set checkbox to enable/disable egress queue 4 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 5	Set checkbox to enable/disable egress queue 5 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 6	Set checkbox to enable/disable egress queue 6 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 7	Set checkbox to enable/disable egress queue 7 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.
Queue 8	Set checkbox to enable/disable egress queue 8 rate limit. If egress rate limit is enabled, rate limit value needs to be assigned.

## 4.12. Diagnostics

Use the Diagnostics pages to configure settings for the switch diagnostics feature or operating diagnostic utilities.

### 4.12.1. Logging

#### 4.12.1.1. Property

To enable/disable the logging service, click **Diagnostics > Logging > Property**.

The screenshot displays the 'Property' configuration page for logging. It is organized into four main sections: State, Console Logging, RAM Logging, and Flash Logging. Each section contains a 'State' checkbox and a 'Minimum Severity' dropdown menu. The 'State' checkboxes for Console Logging, RAM Logging, and Flash Logging are all checked. The 'Minimum Severity' dropdowns are all set to 'Notice'. Below each dropdown, a note lists the severity levels: Emergency, Alert, Critical, Error, Warning, Notice. An 'Apply' button is located at the bottom of the page.

Figure 177 - Diagnostics > Logging > Property

Item	Description
State	Enable/Disable the global logging services. When the logging service is enabled, logging configuration of each destination rule can be individually configured. If the logging service is disabled, no messages will be sent to these destinations.
<b>Console Logging</b>	
State	Enable/Disable the console logging service
Minimum Severity	The minimum severity for the console logging.
<b>RAM Logging</b>	
State	Enable/Disable the RAM logging service.
Minimum Severity	The minimum severity for the RAM logging.
<b>Flash Logging</b>	
State	Enable/Disable the flash logging service.
Minimum Severity	The minimum severity for the flash login.

#### 4.12.1.2. Remote Server

To configure the remote logging server, click **Diagnostics > Logging > Remote Server**.

The screenshot shows a web interface for configuring remote logging servers. At the top, there's a search bar with a magnifying glass icon. Below it is a table titled "Remote Server Table". The table has a header row with columns: "Entry" (containing a checkbox), "Server Address", "Server Port", "Facility", and "Minimum Severity". Below the header, a light green bar indicates "0 results found.". At the bottom of the interface, there are three buttons: "Add", "Edit", and "Delete".

Figure 178 - Diagnostics > Logging > Remote Server

Item	Description
Server Address	The IP address of the remote logging server.
Server Ports	The port number of the remote logging server.
Facility	The facility of the logging messages. It can be one of the following values: local0, local1, local2, local3, local4, local5, local6, and local7.

Severity	<p>The minimum severity.</p> <ul style="list-style-type: none"> <li>• Emergence: System is not usable.</li> <li>• Alert: Immediate action is needed.</li> <li>• Critical: System is in the critical condition.</li> <li>• Error: System is in error condition</li> <li>• Warning: System warning has occurred</li> <li>• Notice: System is functioning properly, but a system notice has occurred.</li> <li>• Informational: Device information.</li> <li>• Debug: Provides detailed information about an event.</li> </ul>
----------	---

## 4.12.2. Mirroring

To display Port Mirroring web page, click **Diagnostics > Mirroring**

**Mirroring Table**

Q

Figure 180 - Diagnostics > Mirroring > Edit Mirroring

Item	Description
Session ID	Selected mirror session ID.
State	Select mirror session state: port-base mirror or disable <ul style="list-style-type: none"> <li>Enabled: Enable port-based mirror</li> <li>Disabled: Disable mirror.</li> </ul>
Monitor Port	Select mirror session monitor port, and select whether
Ingress port	Select mirror session source RX ports.
Egress port	Select mirror session source TX ports.

### 4.12.3. Ping

For the ping functionality, click **Diagnostics > Ping**

**Address Type**  
☒ Hostname  
☐ IPv4  
☐ IPv6

**Server Address**

**Count**  
 (1 - 65535)

**Ping Result**

Packet Status	
Status	N/A
Transmit Packet	0
Receive Packet	0
Packet Lost	0%

Round Trip Time	
Min	0.0 ms
Max	0.0 ms
Average	0.0 ms

Figure 181 - Diagnostics > Ping

Item	Description
Address Type	Specify the address type to “Hostname” or “IPv4” .
Server Address	Specify the Hostname/IPv4 address for the remote logging server.
Count	Specify the numbers of each ICMP ping request.

#### 4.12.4. Traceroute

For trace route functionality, click **Diagnostics > Traceroute**.

Address Type: ☒ Hostname ☐ IPv4

Server Address:

Time to Live:  (2 - 255, default 30)

**Traceroute Result**

Figure 182 - Diagnostics > Traceroute

Item	Description
Address Type	Specify the address type to “Hostname” or “IPv4” .
Server Address	Specify the Hostname/IPv4 address for the remote logging server.
Time to Live	Specify the max hops of hosts for traceroute.

### 4.12.5. Copper Test

For copper length diagnostic, click **Diagnostics > Copper Test**.

Port:

**Copper Test Result**

Cable Status	
Port	N/A
Result	N/A
Length	N/A

Figure 183 - Diagnostics > Copper Test

Item	Description
------	-------------

Port	Specify the interface for the copper test.
Copper Test Result	
Port	The interface for the copper test.
Result	<p>The status of copper test. It include: •</p> <ul style="list-style-type: none"> <li>• OK: Correctly terminated pair. •</li> <li>• Short Cable: Shorted pair. •</li> <li>• Open Cable: Open pair, no link partner. •</li> <li>• Impedance Mismatch: Terminating impedance is not in the reference range. •</li> </ul>
Length	Distance in meter from the port to the location on the cable where the fault was discovered.

### 4.12.6. Fiber Module

The Optical Module Status page displays the operational information reported by the Small Form-factor Pluggable (SFP) transceiver. Some information may not be available for SFPs without the supports of digital diagnostic monitoring standard SFF-8472.

To display the Optical Module Diagnostic page, click **Diagnostics > Fiber Module**.

[Fiber Module Table](#)

	Port	Temperature (C)	Voltage (V)	Current (mA)	Output Power (mW)	Input Power (mW)	OE Present	Loss of Signal

Figure 189 - Management > User Account

Item	Description
Username	User name of the account.
Privilege	Select privilege level for new account. <ul style="list-style-type: none"> <li>Admin: Allow to change switch settings. Privilege value equals to 15.</li> <li>User: See switch settings only. Not allow to change it. Privilege level equals to 1.</li> </ul>

Click "Add" or "Edit" button to view the Add/Edit User Account menu.

The image shows two web forms for user account management. The top form is titled "Add User Account" and the bottom form is titled "Edit User Account". Both forms are enclosed in a light blue border with a dashed blue border around the input fields. The "Add" form has empty input fields for Username, Password, and Confirm Password, and radio buttons for Privilege (Admin is selected). The "Edit" form has "admin" pre-filled in the Username field, and empty input fields for Password and Confirm Password, with the same Privilege radio buttons (Admin is selected). Both forms have "Apply" and "Close" buttons at the bottom.

Figure 190 - Management > User Account > Add/Edit User Account

Item	Description
Username	User name of the account.
Password	Set password of the account.
Confirm Password	Set the same password of the account as in "Password" field.
Privilege	Select privilege level for new account. <ul style="list-style-type: none"> <li>Admin: Allow to change switch settings. Privilege value equals to 15.</li> <li>User: See switch settings only. Not allow to change it. Privilege level equals to 1.</li> </ul>

## 4.13.2. Firmware

### 4.13.2.1. Upgrade / Backup

This page allow user to upgrade or backup firmware image through HTTP or TFTP server.

To display firmware upgrade or backup web page, click **Management > Firmware > Upgrade/Backup**

Figure 191 shows the Firmware Upgrade/Backup web page. The 'Action' section has 'Upgrade' selected. The 'Method' section has 'HTTP' selected. The 'Filename' section has a text input field with the placeholder text 'ファイルを選択' and '選択されていません'. An 'Apply' button is located at the bottom left.

Figure 191 - Management > Firmware > Upgrade/Backup

Item	Description
Action	Firmware operations <ul style="list-style-type: none"><li>• Upgrade: Upgrade firmware from remote host to DUT.</li><li>• Backup: Backup firmware image from DUT to remote host.</li></ul>
Method	Firmware upgrade / backup method. <ul style="list-style-type: none"><li>• TFTP: Using TFTP to upgrade/backup firmware.</li><li>• HTTP: Using WEB browser to upgrade/backup firmware.</li></ul>
Filename	Use browser to upgrade firmware, you should select firmware image file on your host PC.

To display firmware upgrade or backup web page, click **Management > Firmware > Upgrade/Backup**

Figure 192 shows the Firmware Upgrade/Backup web page. The 'Action' section has 'Upgrade' selected. The 'Method' section has 'TFTP' selected. The 'Address Type' section has 'Hostname' selected. The 'Server Address' and 'Filename' sections have empty text input fields. An 'Apply' button is located at the bottom left.

Figure 192 - Management > Firmware > Upgrade/Backup

Item	Description

Address Type	Specify TFTP server address type <ul style="list-style-type: none"> <li>Hostname: Use domain name as server address</li> <li>IPv4: Use IPv4 as server address</li> <li>IPv6: Use IPv6 as server address</li> </ul>
Server Address	Specify TFTP server address.
Filename	File name saved on remote TFTP server.

### 4.13.3.2. Save Configuration

This page allow user to manage configuration file saved on DUT and click

“Restore Factory Default” button to restore factory defaults.  
To display the Save Configuration web page, click **Management > Configuration > Save Configuration**

Figure 200 - Management > Configuration > Save Configuration

Item	Description
Source File	Source file types <ul style="list-style-type: none"> <li>Running Configuration: Copy running configuration file to destination.</li> <li>Startup Configuration: Copy startup configuration file to destination.</li> </ul>
Destination File	Destination file <ul style="list-style-type: none"> <li>Startup Configuration: Save file as startup configuration.</li> <li>Backup Configuration: Save file as backup configuration.</li> </ul>

## 4.13.4. SNMP

### 4.13.4.1. View

To configure and display the SNMP view table, click **Management > SNMP > View**.  
[View Table](#)

Figure 201 - Management > SNMP > View

Item	Description
View	The SNMP view name. Its maximum length is 30 characters
OID Subtree	Specify the ASN.1 subtree object identifier (OID) to be included or excluded from the SNMP view
Type	Include or exclude the selected MIBs in the view

### 4.13.4.2. Group

To configure and display the SNMP group settings, click **Management > SNMP > Group**.

Group Table

Showing **All** entries      Showing 0 to 0 of 0 entries     

	Group	Version	Security Level	View		
				Read	Write	Notify
0 results found.						

Configure [SNMP View](#) to associate a non-default view with a group.

**1**

Figure 202 - Management > SNMP > Group

Item	Description
Group	Specify SNMP group name, and the maximum length is 30 characters.
Version	Specify SNMP version <ul style="list-style-type: none"> <li>• SNMPv1: SNMP Version 1.</li> <li>• SNMPv2: Community-based SNMP Version 2.</li> <li>• SNMPv3: User security model SNMP version 3.</li> </ul>
Security Level	Specify SNMP security level <ul style="list-style-type: none"> <li>• No Security: Specify that no packet authentication is performed.</li> <li>• Authentication: Specify that no packet authentication without encryption is performed.</li> <li>• Authentication and Privacy: Specify that no packet authentication with encryption is performed.</li> </ul>
<b>View</b>	
Read	Group read view name.
Write	Group write view name.
Notify	The view name that sends only traps with contents that is included in SNMP view selected for notification.

Click "Add" or "Edit" button to view the Add/Edit Group menu.

Figure 205 - Management > SNMP > Group > Add/Edit Community

Item	Description
Community	The SNMP community name. Its maximum length is 20 characters.
Type	SNMP Community mode <ul style="list-style-type: none"> <li>Basic: SNMP community specifies view and access right.</li> <li>Advanced: SNMP community specifies group.</li> </ul>
View	Specify the SNMP view to define the object available to the community.
Access	SNMP access mode <ul style="list-style-type: none"> <li>Read-Only: Read only.</li> <li>Read-Write: Read and write.</li> </ul>
Group	Specify the SNMP group configured by the command SNMP group to define the object available to the community.

#### 4.13.4.4. User

To configure and display the SNMP users, click **Management > SNMP > User**.

The screenshot shows a web interface for managing SNMP users. At the top, there's a 'User Table' header. Below it, a status bar indicates 'Showing 0 to 0 of 0 entries' and a search bar. The table itself has a green header with columns: 'User', 'Group', 'Security Level', 'Authentication Method', and 'Privacy Method'. The body of the table is empty, with a message '0 results found.' Below the table, there are navigation buttons: 'First', 'Previous', '1' (highlighted), 'Next', and 'Last'. At the bottom, there are three buttons: 'Add', 'Edit', and 'Delete'. A note at the bottom says 'Configure SNMP Group to associate an SNMPv3 group with an SNMPv3 user.'

Figure 206 - Management > SNMP > User

Item	Description
User	Specify the SNMP user name on the host that connects to the SNMP agent. The max character is 30 characters. For the SNMP v1 or v2c, the user's name must match the community's name.
Group	Specify the SNMP group to which the SNMP user belongs.
Security Level	SNMP privilege mode <ul style="list-style-type: none"> <li>No Security: Specify that no packet authentication is performed.</li> <li>Authentication: Specify that no packet authentication without encryption is performed.</li> <li>Authentication and Privacy: Specify that no packet authentication with encryption is performed.</li> </ul>

Authentication Method	<p>Authentication Protocol which is available when Privilege Mode is Authentication or Authentication and Privacy.</p> <ul style="list-style-type: none"> <li>• None: No authentication required.</li> <li>• MD5: Specify the HMAC-MD5-96 authentication protocol.</li> <li>• SHA: Specify the HMAC-SHA-96 authentication protocol</li> </ul>
Privacy Method	<p>Encryption Protocol</p> <ul style="list-style-type: none"> <li>• None: No privacy required.</li> <li>• DES: DES algorithm</li> </ul>

Figure 207 - Management > SNMP > User > Add/Edit User

Item	Description
User	Specify the SNMP user name on the host that connects to the SNMP agent. The max character is 30 characters.
Group	Specify the SNMP group to which the SNMP user belongs.
Security Level	SNMP privilege mode <ul style="list-style-type: none"> <li>• No Security: Specify that no packet authentication is performed.</li> <li>• Authentication: Specify that no packet authentication without encryption is performed.</li> <li>• Authentication and Privacy: Specify that no packet authentication with encryption is performed.</li> </ul>
<b>Authentication</b>	
Method	Authentication Protocol which is available when Privilege Mode is Authentication or Authentication and Privacy. <ul style="list-style-type: none"> <li>• None: No authentication required.</li> <li>• MD5: Specify the HMAC-MD5-96 authentication protocol.</li> <li>• SHA: Specify the HMAC-SHA-96 authentication protocol.</li> </ul>
Password	The authentication password, the number of character range is 8 to 32 characters.
<b>Privacy</b>	

Method	Encryption Protocol <ul style="list-style-type: none"> <li>• None: No privacy required.</li> <li>• DES: DES algorithm</li> </ul>
Password	The privacy password, the number of character range is 8 to 64 characters.

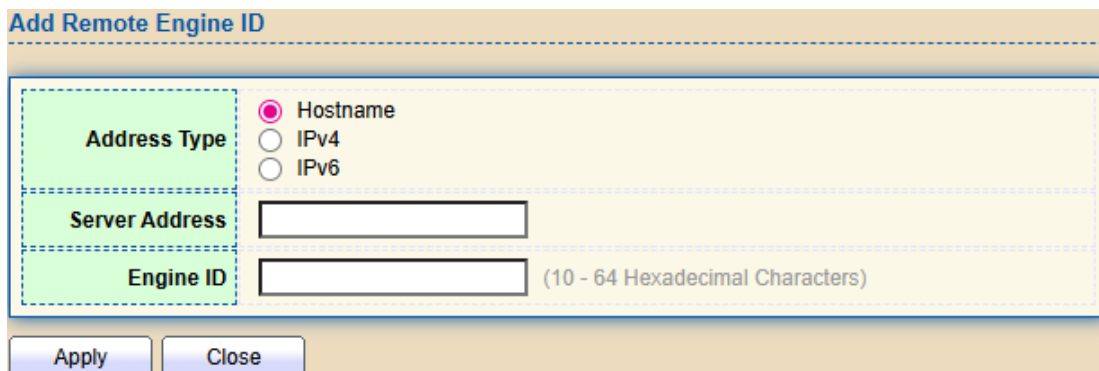

#### 4.13.4.5. Engine ID

To configure and display SNMP local and remote engine ID, click **Management > SNMP > Engine ID**.

Figure 208 - Management > SNMP > Engine ID

Item	Description
<b>Local Engine ID</b>	
Engine ID	If checked “User Defined” , the local engine ID is configured by user, else use the default Engine ID which is made up of MAC and Enterprise ID. The user defined engine ID is ranging 10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.
<b>Remote Engine ID Table</b>	
Server Address	Remote host.
Engine ID	Specify Remote SNMP engine ID. The engine ID is range10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

Click "Add" button to view Add Remote Engine ID menu.

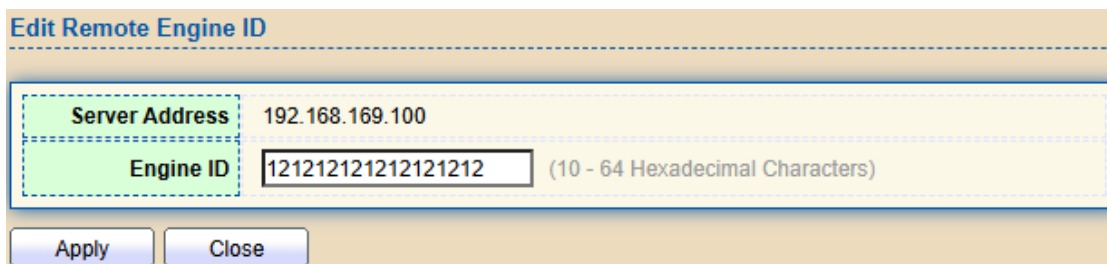

The dialog box titled "Add Remote Engine ID" contains three input fields: "Address Type" with radio buttons for Hostname (selected), IPv4, and IPv6; "Server Address" with a text box; and "Engine ID" with a text box and a note "(10 - 64 Hexadecimal Characters)". At the bottom are "Apply" and "Close" buttons.

Figure 209 - Management > SNMP > Add Engine ID

Item	Description
Address Type	Remote host address type for Hostname/IPv4/IPv6.
Server Address	Remote host.
Engine ID	Specify Remote SNMP engine ID. The engine ID is range10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

Click "Edit" button to view Edit Remote Engine ID menu.

The dialog box titled "Edit Remote Engine ID" contains two input fields: "Server Address" with a text box containing "192.168.169.100" and "Engine ID" with a text box containing "1212121212121212" and a note "(10 - 64 Hexadecimal Characters)". At the bottom are "Apply" and "Close" buttons.

Figure 210 - Management > SNMP > Edit Engine ID

Item	Description
Server Address	Edit Remote host address
Engine ID	Specify Remote SNMP engine ID. The engine ID is range10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

#### 4.13.4.6. Trap Event

To configure and display SNMP trap event, click **Management > SNMP > Trap Event**.

Authentication Failure	<input checked="" type="checkbox"/> Enable
Link Up / Down	<input checked="" type="checkbox"/> Enable
Cold Start	<input checked="" type="checkbox"/> Enable
Warm Start	<input checked="" type="checkbox"/> Enable
New Root	<input checked="" type="checkbox"/> Enable
Topology Change	<input checked="" type="checkbox"/> Enable

Apply

Figure 211 - Management > SNMP > Trap Event

Item	Description
Authentication Failure	SNMP authentication failure trap, when community not match or user authentication password not match.
Link Up/Down	Port link up or down trap.
Cold Start	Device reboot configure by user trap.
Warm Start	Device reboot by power down trap.

#### 4.13.4.7. Notification

To configure the hosts to receive SNMPv1/v2/v3 notification, click **Management > SNMP > Notification**.

**Notification Table**

Showing  entries      Showing 0 to 0 of 0 entries     

<input type="checkbox"/>	Server Address	Server Port	Timeout	Retry	Version	Type	Community / User	Security Level
0 results found.								

For SNMPv1,2 Notification, [SNMP Community](#) needs to be defined.  
For SNMPv3 Notification, [SNMP User](#) must be created.

First Previous **1** Next Last

Figure 212 - Management > SNMP > Notification

Item	Description
Server Address	IP address or the hostname of the SNMP trap recipients.
Server Port	Recipient server UDP port number.
Timeout	Specify the SNMP informs timeout.
Retry	Specify the retry counter of the SNMP informs.
Version	Specify SNMP notification version <ul style="list-style-type: none"> <li>• SNMPv1: SNMP Version 1 notification.</li> <li>• SNMPv2: SNMP Version 2 notification.</li> <li>• SNMPv3: SNMP Version 3 notification.</li> </ul>

Type	Notification Type <ul style="list-style-type: none"> <li>• Trap: Send SNMP traps to the host.</li> <li>• Inform: Send SNMP informs to the host.</li> </ul>
Community/User	SNMP community/user name for notification. If version is SNMPv3 the name is user name, else is community name.
Security Leve	SNMP trap packet security level <ul style="list-style-type: none"> <li>• No Security: Specify that no packet authentication is performed.</li> <li>• Authentication: Specify that no packet authentication without encryption is performed.</li> <li>• Authentication and Privacy: Specify that no packet authentication with encryption is performed.</li> </ul>

Click "Add" button to view the Notification menu.

Figure 215 - Management &gt; RMON &gt; Statistics

Item	Description
------	-------------

Port	The port for the RMON statistics.
Bytes Received	Number of octets received, including bad packets and FCS octets, but excluding framing bits.
Drop Events	Number of packets that were dropped.
Packets Received	Number of packets received, including bad packets, Multicast packets, and Broadcast packets.
Broadcast Packets	Number of good Broadcast packets received. This number does not include Multicast packets.
Multicast Packets	Number of good Multicast packets received.
CRC & Align Errors	Number of CRC and Align errors that have occurred.
Undersize Packets	Number of undersized packets (less than 64 octets) received.
Oversize Packets	Number of oversized packets (over 1518 octets) received.
Fragments	Number of fragments (packets with less than 64 octets, excluding framing bits, but including FCS octets) received.
Jabbers	<p>Number of received packets that were longer than 1632 octets. This number excludes frame bits, but includes FCS octets that had either a bad FCS (Frame Check Sequence) with an integral number of octets (FCS Error) or a bad FCS with a non-integral octet (Alignment Error) number. A Jabber packet is defined as an Ethernet frame that satisfies the following criteria: •</p> <ul style="list-style-type: none"> <li>● Packet data length is greater than MRU.</li> <li>● Packet has an invalid CRC.</li> <li>● RX error event has not been detected.</li> </ul>
Collisions	Number of collisions received. If Jumbo Frames are enabled, the threshold of Jabber Frames is raised to the maximum size of Jumbo Frames.
Frames of 64 Bytes	Number of frames, containing 64 bytes that were received.
Frames of 65 to 127 Bytes	Number of frames, containing 65 to 127 bytes that were received.
Frames of 128 to 255 Bytes	Number of frames, containing 128 to 255 bytes that were received.
Frames of 256 to 511 Bytes	Number of frames, containing 256 to 511 bytes that were received.
Frames of 512 to 1023 Bytes	Number of frames, containing 512 to 1023 bytes that were received.
Frames Greater than 1024 Bytes	Number of frames, containing 1024 to 1518 bytes that were received.
Clear	Clear the statistics for the selected ports.
Refresh	Refresh the statistics for the selected ports.

View	View the statistics on the specified port.
------	--

Click "View" button to view the view Port Statistics menu.

**View Port Statistics**

### 4.13.5.2. History

For the RMON history, click **Management > RMON > History**.

**History Table**

Showing **All** entries      Showing 0 to 0 of 0 entries     

	Entry	Port	Interval	Owner	Sample	
					Maximum	Current
0 results found.						

Figure 217 - Management > RMON > History

Item	Description
Port	The port for the RMON history.

Interval	The number of seconds for each sample.
Owner	The owner's name of event (0~31 characters).
Sample Maximum	The maximum number of buckets.
Sample Current	The current number of buckets.
Add	Add the new RMON history entries
Edit	Edit the RMON history
Delete	Delete the RMON histories
View	View the history log.

Click "Add/Edit" button to Add/Edit the History menu.

The image shows two identical configuration windows, one for 'Add History' and one for 'Edit History'. Each window contains a form with the following fields:

- Entry:** A dropdown menu set to '1'.
- Port:** A dropdown menu set to 'GE1'.
- Max Sample:** A text input field with '50', followed by the text '(1 - 50, default 50)'.
- Interval:** A text input field with '1800', followed by the text '(1 - 3600, default 1800)'.
- Owner:** An empty text input field.

Below the form fields, the 'Add History' window has an 'Apply' button, and the 'Edit History' window has both 'Apply' and 'Close' buttons.

Figure 218 - Management > RMON > Add /Edit History

Item	Description
Port	Specify port for the RMON history.
Max Sample	Specify the maximum number of buckets.
Interval	Specify the number of seconds for each sample.
Owner	Specify the owner's name of event (0~31 characters).

Click "View" button to view the History menu.

Figure 221 - Management > RMON > Add/Edit Event

Item	Description
Notification	Specify the notification type for the event, and the possible value are: • <ul style="list-style-type: none"> <li>• None: Nothing for notification.</li> <li>• Event Log: Logging the event in the RMON Event Log table</li> <li>• Trap: Send a SNMP trap.</li> <li>• Event Log and Trap: Logging the event and send the SNMP trap</li> </ul>
Community	Specify the SNMP community when the notification type is specified as “Trap” or “Event Log and Trap”
Description	Specify the description for the event.
Owner	Specify owner for the event.

Click "View" button to view the View Event Log menu.

Figure 222 - Management > RMON > View Event Log

Item	Description
Log ID	The log identifier.
Time	The time that the event was triggered.
Description	The description for the event.

#### 4.13.5.4. Alarm

For the RMON Alarm menu, click **Management > RMON > Alarm**.

Figure 223 - Management > RMON > Alarm

Item	Description
Port	The port configuration for the RMON alarm.

Counter	<p>The counter for sampling •</p> <ul style="list-style-type: none"> <li>● Drop Events (Drop Event): Total number of events received in which the packets were dropped. •</li> <li>● Octets (Received Bytes): Octets. •</li> <li>● Pkts (Received Packets): Number of packets.</li> </ul>
	<ul style="list-style-type: none"> <li>● Broadcast Pkts (Broadcast Packets Received): Broadcast packets. •</li> <li>● Multicast Pkts (Multicast Packets Received): Multicast packets. •</li> <li>● CRC Align Error (CRC and Align Error): CRC alignment error. •</li> <li>● Undersize Pkts (Undersize Packets): Number of undersized packets. •</li> <li>● Oversize Pkts (Oversize Packets): Number of oversized packets. •</li> <li>● Fragments (Fragments): Total number of packet fragment. •</li> <li>● Jabbers (Jabbers): Total number of packet jabber.</li> <li>● Collisions (Collisions): Collision. •</li> <li>● Pkts64Octetes (Frames of 64 Bytes): Number of packets size 64 octets. •</li> <li>● Pkts65to127Octetes (Frames of 65 to 127 Bytes): Number of packets size 65 to 127 octets.</li> <li>● Pkts128to255Octetes (Frames of 128 to 255 Bytes): Number of packets size 128 to 255 octets.</li> <li>● Pkts256to511Octetes (Frames of 256 to 511 Bytes): Number of packets size 256 to 511 octets.</li> <li>● Pkts512to1023Octetes (Frames of 512 to 1023 Bytes): Number of packets size 512 to 1023 octets.</li> <li>● Pkts1024to1518Octetes (Frames Greater than 1024 Bytes): Number of packets size 1024 to 1518 octets.</li> </ul>
Sampling	<p>The sampling type including: •</p> <ul style="list-style-type: none"> <li>● Absolute: The selected variable value is compared directly with the thresholds at the end of the sampling interval. •</li> <li>● Delta: The selected variable value of the last sample is subtracted from the current value and the difference is compared with the thresholds.</li> </ul>
Interval	The number of seconds for each sample.
Owner	The owner for the alarm entry.
Trigger	The type of event triggering.

Rising Threshold	The threshold for firing rising event.
Rising Event	The rising event when alarm was fired.
Falling Threshold	The threshold for firing falling event.
Falling Event	The falling event when alarm was fired.

Click "Add/Edit" button to view the Add/Edit menu.

Figure 224 - Management > RMON > Add/Edit Alarm

Item	Description
Port	Specify the port for sampling
Counter	<p>Specify the counter for sampling .</p> <ul style="list-style-type: none"> <li>● Drop Event: Total number of events received in which the packets were dropped. .</li> <li>● Received Bytes (Octets): Octets.</li> <li>● Received Packets: Number of packets.</li> <li>● Broadcast Packets Received: Broadcast packets.</li> <li>● Multicast Packets Received: Multicast packets.</li> <li>● CRC and Align Error: CRC alignment error. .</li> <li>● Undersize Packets: Number of undersized packets.</li> </ul>
	<ul style="list-style-type: none"> <li>● Oversize Packets: Number of oversized packets.</li> <li>● Fragments: Total number of packet fragment.</li> <li>● Jabbers: Total number of packet jabber. .</li> <li>● Collisions: Collision. .</li> <li>● Frames of 64 Bytes: Number of packets size 64 octets.</li> <li>● Frames of 65 to 127 Bytes: Number of packets size 65 to 127 octets. .</li> <li>● Frames of 128 to 255 Bytes: Number of packets size 128 to 255 octets. .</li> <li>● Frames of 256 to 511 Bytes: Number of packets size 256 to 511 octets. .</li> <li>● Frames of 512 to 1023 Bytes: Number of packets size 512 to 1023 octets. .</li> <li>● Frames Greater than 1024 Bytes: Number of packets size 1024 to 1518 octets.</li> </ul>
Sampling	<p>Specify the sampling type. .</p> <ul style="list-style-type: none"> <li>● Absolute: The selected variable value is compared directly with the thresholds at the end of the sampling interval. .</li> <li>● Delta: The selected variable value of the last sample is subtracted from the current value and the difference is compared with the thresholds.</li> </ul>
Interval	Specify the sampling interval.
Owner	Specify the owner for the sampling.
Trigger	Specify the type for the alarm trigger.
RISING	
Threshold	Specify the threshold for firing rising event.

Event	Specify the index of rising event when alarm was fired.
Falling	
Threshold	Specify the threshold for firing falling event.
Event	Specify the index of falling event when alarm was fired.

## 4.14. Loop Prevention

To configure Loop Prevention setting, click Loop Prevention.

Item	Description
State	Loop Prevention state. <ul style="list-style-type: none"> <li>● Enabled: Enable Loop Prevention.</li> <li>● Disabled: Disable Loop Prevention.</li> </ul>
